SERVICES

INSPECTION SERVICES

* Lifting Equipment Thorough Examination - LOLER Shackles, Eyebolts, Slings, Chains, Hooks

How often should lifting equipment require a Thorough Examination?

LOLER inspections are a legal requirement and are part of managing the safe condition of lifting equipment. LOLER inspections should be carried out every 6 months (maximum) for lifting equipment.

* Harness & Lanyard Inspections

How often should a Harness and Lanyard require a Thorough Examination?

HSE guidelines recommend a documented inspection by a competent person **every six months**, but for some activities, e.g. scaffolding, it is recommended that this interval is reduced to every three months due to the harsh environment in which the equipment is being used.
