Spabord & Hipercare

is ideally suited for a number of commercial installations where hygiene is paramount, notably within Healthcare.

Panels are produced with an anti-bacterial treatment built into the laminate to prevent the establishment and growth of micro-organisms.

This provides a surface that is permanently effective against bacteria strains with antibiotic resistance - such as MRSA.

Bathrooms and shower enclosures can be instantly transformed to create a unique, attractive finish to your bathroom.

The Spabord design collection has been developed to combine natural, luxurious effects with elegant, timeless designs. Stones, marbles and metallic effects create a natural mineral look whilst the introduction of a rich wood design provides a modern, classic look to any bathroom.

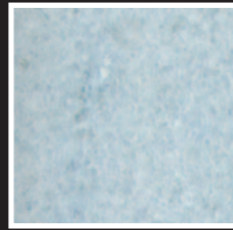

Spabord panels are designed for their functionality and long lasting properties. They offer a stylish appearance that will last for years.

A quick and easy alternative to tiles, Wilsonart Spabord Panels are completely waterproof and specifically designed to transform your shower and bathroom walls with a hygienic, durable surface that's easily maintained.

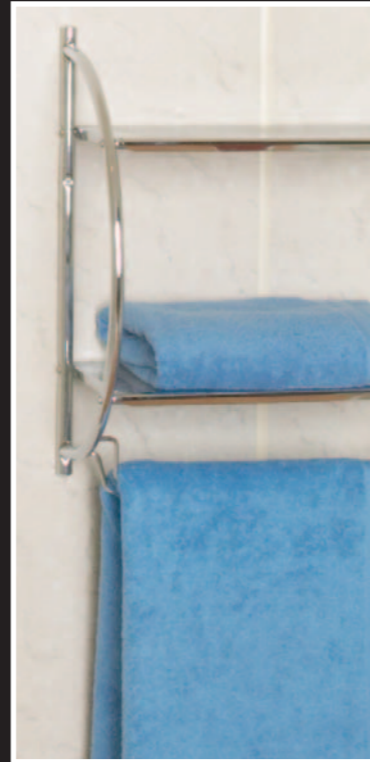

Spabord
simple • practical • attractive

Spabord panels are surfaced in Wilsonart laminate and offer all the advantages of a hardwearing, decorative surface that's easy to maintain.

Colours and designs have been selected to create a variety of bathroom and shower enclosures to suit all tastes. Spabord is warm to the touch and provides a practical alternative to tiles.

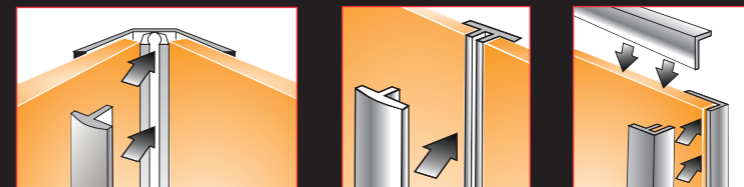

The hygienic surface does not require any grouting, effectively eliminating many of the places that germs and mould can penetrate.

Spabord panels are fast and easy to install with no visible screws or nails. Each panel is simply cut to size and affixed directly to the wall, saving time and effort from the rigours of tiling.

Spabord panels can be fitted over most existing surfaces and are perfect for both shower enclosures and around the entire bathroom. The inherent technical qualities of the laminate surface make it a practical material for hygienic, high wear areas. It's non-porous surface is resistant to stains, scratches, heat, solvents and - to a very large extent - chemicals.

Spabord panels are completely waterproof and have been tested and approved by FIRA. They are a cost effective alternative to tiles with the added benefit of being easy to clean and maintain. No specialist skills are required to install the panels.
