

New Venture Products aims to offer one of the largest range of high visibility anti climb paint warning available anywhere to ensure that we offer the right sign for your requirements. By law it is necessary to clearly indicate when anti-climb paint has been used. The general consensus is that signs should be no more than 3-4 metres apart but that could vary depending on the location.

The first type of sign we offer is in landscape format and available in 300mm x 100mm (standard) or 600mm x 200mm (large):

This is available in three different materials:

- Scuff resistant and high adhesion Self Adhesive Vinyl suitable for sticking onto flat surfaces. Suitable for internal or external use it is printed using fade resistant inks for a durable lifespan. This sign is available in both sizes.
- Rigid Plastic that can be fixed to most surfaces. It can be drilled or glued with an appropriate adhesive. It is tough fade resistant and long lasting. This sign is also available in both sizes.
- Aluminium composite is a tough but lightweight sign designed for long term use. Not only can it be fixed to walls but it is also strong enough to be wired to fences or framed and staked. This size is only available in the smaller size.

The second upright (portrait) sign format we offer is 150mm x 200mm (Approx A5), 200mm x 300mm (Approx A4) and 100mm x 150mm (Approx A6), available in two different materials:

- Rigid Plastic that can be fixed to most surfaces by drilling or with a suitable adhesive. It is tough fade resistant and long lasting. Available in A4, A5 and A6.
- Scuff resistant self adhesive vinyl is suitable for sticking on to most flat surfaces. It is suitable for external or internal use and is printed with fade resistant inks. Available in A5 and A6 only.

If there are any other sizes of sign that are required please get in contact with us and we will be happy to provide you with a quote.
