

HUDEVAD

Radiator
Family

Plan mounted in recesses

Plan Fionia is a newcomer to the Plan Family, to complement the redesigned Plan. The unique classical Hudevad design, with water filled, rebated front plate, and closed sides is unchanged. The new design incorporates rear convector fins and an elegant integrated top grille, which completes the Plan Fionia design.

Plan Fionia 68

Plan Fionia 98

The use of robust materials and well considered design not only ensures a long life for the Plan radiator but also allows it to withstand damage from rough treatment.

PLAN Horizon

When Plan radiators are combined with the Horizon in-fill panel system, continuous, discreet runs are created that elegantly blend in with their surroundings and conceal pipework.

Plan with Horizon in-fill panel system

PLAN XV

Plan XV consists of several radiators mounted together behind one vertical front plate. This creates new possibilities of high heat output on limited wall space.

Plan XV mounted in recesses

Plan single

Plan double

P5 model UR-flex (concealed pipe work)

The redesign of the P5 radiator is also based on the classical design and concept of the Hudevad radiator Family.

The P5 radiator has the same simplicity as a Plan. With its open sides and lightness of design it is like no other radiator. The smooth front and rebated edge add identity, as well as optical depth, despite the radiator's slimness.

P5

P5K

P5 and P5K are made of robust material and withstand rough treatment - both appear forever young, no matter what their age.

P5V and P5KV change the traditional perception of radiators and offer quite another way of using them, whether a pronounced or discreet heating solution is desired. Inverted from the horizontal to give a tall, slim shape and sculptural appearance they add optical balance, making the room seem taller. Their modest space requirements give new freedom in laying out a room.

The P5 Family can be ordered with an electric element so the radiator can give heat where there is no water heating system. An electric element also allows continuous heating at times when the central heating system is not in use.

The P5 models are also available as double radiators, consequently they can now meet higher heating demands, offering greater flexibility.

P5V

Angled P5 Horizon in-fill panel system mounted at high level

P5V with towel pegs

When combined with the Horizon in-fill panel system, P5 and P5K form continuous discreet runs that elegantly blend into the surroundings. This allows the pipework and fittings to be concealed to benefit clean lines.

Fitted with pegs or rails, the Hudevad P5V and P5KV are elegant towel radiators - optimising space available.

SC and Radius

SCE

With its transparency and bold, forceful design, the SC has a beautiful, sculptured appearance. It is equally suited to low heights in front of glazing, tall against walls or free standing as a room divider.

SCE

SCD

Radius

Radius

The inspiration for the re-design of the Radius also came from the Hudevad design idea.

The cylindrical shape is enhanced by the linear effect of the top grille.

Radius is especially suited for use in front of glazing, achieving an aesthetic balance from both within and outside the building.

P100 is the low level member of the Plan Family. Just 100 mm tall, and designed to be seen from either side, it is ideal in front of glazing.

P100

P100

With its recessed aluminum top grille the P100 has an elegant, streamlined design which, in combination with the smooth casing, signals simplicity and dynamism.

P100

The new P200 combines the best features of the low level P100 radiator and the classic Hudevad Plan. With its low height and high output it is ideal in front of glazing, but also wall mounted at either low or high level.

The simple elegant shape of the P200, the characteristic flat, rebated sides and the integrated top grille, blends in harmoniously whether mounted on feet or on the wall.

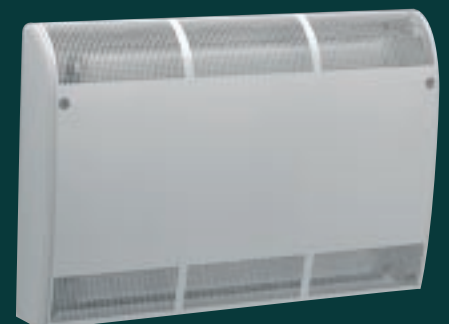

P200

LST Care has been designed for environments where care and safety have top priority. With LST Care the risk of burns can be removed, which is crucial in areas where small children, elderly or disabled people are present.

LST Care is available as an individual enclosure or as a wall-to-wall system. Both options can be wall mounted at or above floor level, concealing and protecting services. The use of steel plate, and the curved shape, gives exceptional rigidity and safety; with the cast iron end panels withstanding accidental damages from beds and trolleys.

LST Care

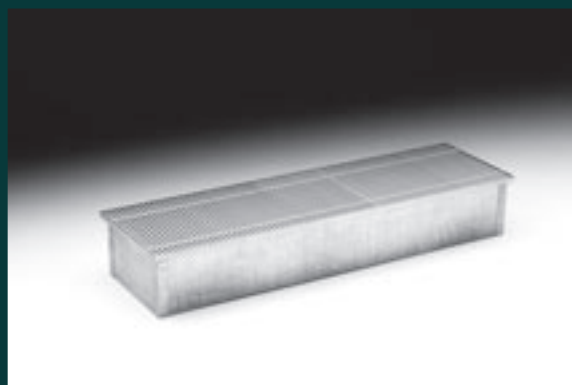

TR trench heater

An innovative heating system, simple and discreet in design, which is developed for the modern, transparent architecture. The TR trench heater is used either solely or together with other heating sources.

TR comes with or without fans. The model supplied with noiseless axial fans is regulated by a control panel.

The durable, though still beautiful, Hudevad Linear aluminium grille ensures that the TR naturally blends into the floor.
