

CANDELABRA PARTS, SCONCES *and associated fittings*

INTRODUCTION

HISTORY: In the following pages we show a collection of parts for candelabra, candlesticks and a series of complete candle sconces. These are all direct and faithful copies of originals dating from the mid seventeenth century to the end of the nineteenth century. Historically, those with sufficient wealth to purchase beeswax candles could also invest in elaborate silver and brassware to display their lighting. The effect of the candle flame could be doubled with the use of mirrors – often referred to as girandoles or pier glasses. The sconces shown on the first few pages of this catalogue were often mounted on such mirrors and reflect the ornate designs fashionable in the seventeenth and eighteenth centuries.

ORIGINS: As with the vast majority of items we offer, the parts shown here were first made from originals sent to us by our customers. More often than not, these were usually made to replace a missing part for which they had an existing survivor. This accounts for the large number of candle socket sleeves which we show here as this is a component which is frequently lost. These (and other component parts) are now available essentially as “spare part surgery”. As we’ve usually not had sight of the piece from which they originate, we are less likely to be able to give definitive advice about their style and period.

ASSEMBLY The complete sconces on the first few pages of the catalogue will be sold fully assembled and there is always the additional option to purchase fixing screws in matching patination. However for the other items, particularly the drip tray sets, we would strongly advise you talk to us about your assembly requirements. Parts, as they come from casting, may have specifically sized threaded holes or none at all; so let us know what you need and we can then make adaptations to suit your needs. This work will be charged for on a case by case basis.

USING THE CATALOGUE: In the printed version, all items are shown as close to life size as possible. For extra convenience, particularly for those looking at the PDF download, full measurements are also given. Typically, these items will be made to order with a 3 – 4 week lead time so we would advise ordering a sample to check suitability before going ahead with a full order as made to order items are not returnable.
