MES – 455MT Semi-Automatic Shrinkwrapper

The Semi-Automatic Shrinkwrapping system consists of an L-Sealer and Shrink Tunnel in a single frame. This machine separates the sealing and shrinking cycles for faster operation. Sealing is performed with the L-Sealer and is followed by shrinking in the compact Shrink Tunnel. The height of the Shrink Tunnel and sealing area are adjustable. The heated airflow inside the tunnel gives an excellent, tight wrap, finish all around the product.

Key benefits

- Advanced microprocessor based electronic controls.

- Simple operations by single operator.

- Versatile machine enabling shrinkwrapping of various applications.

technical data

	MES 455MT
Speed	20 wraps per minute (Product and film dependant)
Sealing Dimension	500mm(l) x 350mm(w) x 150mm(h) (Product height dependant)
Film Type	Polyolefin 8-30um
Maximum Film Reel Width	600mm
Safety	EN13849
Machine Weight	400kg
Machine Dimensions	2570mm(l) x 870mm(w) x 1600mm(h)
Power Supply	400V 50Hz 3 Phase + Neutral
Max Power Consumption	9000W
