

Smoke Control System Maintenance by D+H UK

In an emergency fire situation, the operation of your smoke control system is essential to enable the occupants to escape from the building and to assist the fire service.

To ensure that the life safety smoke control system is available to operate as required, regular service and maintenance is critical.

Our specialist engineers have the experience and knowledge to provide the high level of service required to maintain all smoke control system types:

- + **Natural Smoke Ventilation**
- + **Mechanical Smoke Ventilation / Smoke Extract**
- + **Stair Pressurization Systems**
- + **Car Park Ventilation**

D+H UK are active members of the Smoke Control Association (SCA), and are third party accredited (IFC SDI 19 Certified).

According to the Regulatory Reform Order it is the responsibility of the 'Responsible Person' to have a service and maintenance regime in place to provide a working system.

For high risk buildings or high rise residential buildings, additional responsibilities for the 'Responsible Person' (under the Fire Safety Regulations 2022) are now in place. Please contact us for further details on this.

D+H UK have vast experience, with up to date training providing the necessary skills to keep your smoke control systems reliable.
