Harmonys

**IP/POE Public Announcement
and Programmable Bell Audio System**

Harmonys | Technical Features

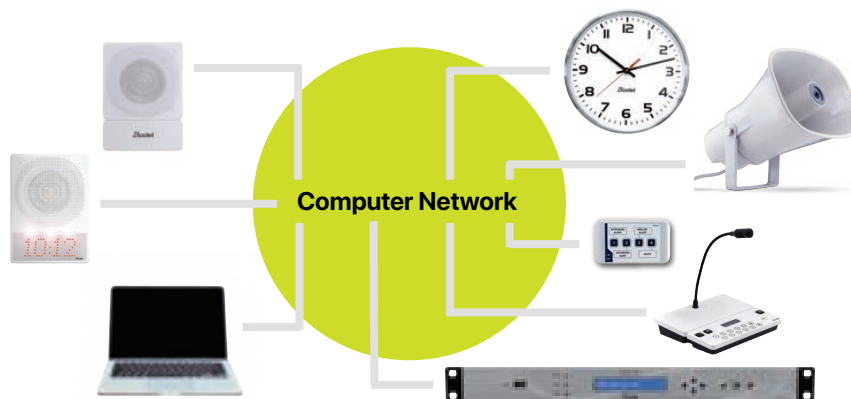

Harmonys is an **adaptable range of audio and visual equipment**. It enables you to program bell sounds, play music, broadcast information, and provide audio and visual alarms.

Our audio and visual systems are **especially suited to the education and industrial sectors**.

IP Technology

The Harmonys range communicates with your IP computer network, which offers a number of benefits:

- + **Simple installation:** use of the existing computer network
- + **POE supply:** simple cabling
- + **Quick and easy configuration** of equipment via Bodet's Sigma software

Broadcast your Messages

Sounders play pre-installed or custom melodies as well as general announcements. Harmonys flash models meet the standards required for public-access buildings (ERP). The device emits two types of luminous flash synchronised on the sounders, one for alert mode and one for bell mode.

The Advantages of Harmonys

- + **Personalised bell sounds** for each sounder or a number of sounders (certain zones)
- + **Quick planning of bell sounds**, using simple, intuitive software
- + **Music played via your choice of source**: possibility of sending all audio-file formats to sounder systems, such as WebRadio and WebMusic (as well as CDs, USBs, SD Cards, etc.)
- + **Co-ordination of the lighting, heating and air-conditioning** via the IP relay, controlled by the Sigma master clock
- + **The Harmonys Talk and Harmonys Notify apps** are available free of charge on Apple® and Android™ smartphone

Clocks and Clock Systems

Bodet Time has developed a wide range of analogue and digital clocks which combine style, accuracy and state-of-the-art technology. Every clock is designed and manufactured to ISO 14001 standards.

Using our years of experience, we can suggest the right clocks for your requirements.
