

CASE STUDY

Trescal sees the benefits of increased productivity and fire safety for the staff!

Commentary by Joe Duignam, Operations Manager at Trescal Stevenage

Global calibration company Trescal installed Kelio's biometric clocking in terminals at their office in Stevenage.

Chosen for our good reputation, Kelio's solution was needed for tracking the time and attendance of the 50 employees at their branch. This ensures that breaks are taken at the correct time and the right number of hours are completed for the week.

The fire muster control has also been of benefit. Joe reports, "If we have any fire alarms, I know we have access to the clocking-in terminal via the online portal. Reports are emailed directly to our personal phones so we can access them from the muster points, keeping staff safe."

Trescal have already seen an increase in productivity due to the terminals being installed. Joe is confident that the Time and Attendance system will support future growth and productivity of the company as the increased working time on site has already been linked to work carried out.

After an initial learning curve, the biometric terminals have been well received by all of the staff. Joe reports, "It is very efficient and does the job we need it for."

After launching Kelio's solutions in the Stevenage office, Trescal hope to install further terminals at their other branches in the future. Trescal has over six branches in the UK and Ireland and is also based around the world.
