Measured By Performance

INFRASTRUCTURE/ AVIATION SERVICES

SERVICES

THIN BOND REPAIRS (MAXI-CRETE)

BBA and HAPAS approved thin bond repairs to concrete or asphalt. Hot applied resin based material, offering a highly cost effective repair solution which avoids the need for a full depth repair.

HOT POUR JOINT SEALING

Cutting, widening, and sealing joints in concrete or asphalt carriageways and airfield pavements using hot bitumen products to meet specified specification.

COLD POUR JOINT SEALING

Cutting, widening, raking and resealing of joints using a high performance 2 part polysulfide fuel resistant, fast cure sealant with high durability and high movement accommodation. Ideal for airfield runways and taxiways EU 14188- 2 compliant.

AGL INSTALLATION

Our teams are trained to cut, drill, breakout and install ducts and AGL pots to CAA regulations. We can provide a rapid response to UK or International requirements, using the latest machinery and processes.

ROCK DRILLING

Rock drilling is super fast, cost-effective and now safer than ever. In contrast to traditional, high-vibration rock drilling methods, we can offer the cost savings of rock drilling without the risk because our equipment is operated hands-free. With a fleet of horizontal, vertical or excavator-mounted drilling rigs to choose from, we're ready to tackle any job.

DIAMOND DRILLING

Diamond drilling is a specialised drilling technique used to cut through the hardest reinforced concrete with utmost precision. Diamond drilling allows our team to make holes of varying diameters and shapes when linked together in a stitch-drilled pattern, and is a quiet and non-percussive technique.

CONCRETE AND ASPHALT SAWING

Self propelled diesel driven floor saws ideal for diamond saw cutting concrete or asphalt in carriageways, runways, hard standings and aprons. Mainly used for forming isolation demolition cuts or widening of existing or new joints.

IRONWORK REINSTATEMENT (PACOPATCH)

Designed to reinstate failing surfaces surrounding manholes, drainage gullies and other public utilities ironworks, it uses two state-of-the-art materials, the IKO Pacopatch Brick and the IKO Pacopatch Grout, which work hand in hand to create an impermeable system made to last.

PULL TESTING

We provide pull testing to fixtures and anchors which have been installed in concrete or masonry, to confirm they meet the specification required. Test certificates are provided on the day of the test.

VAC-EX

A safe and efficient no-dig excavation solution, our Vac-Ex machines combine compressed air and suction to safely loosen and remove ground material. This enables the exposure of underground services without the need to use traditional excavating techniques eliminating service strikes.
