

Keyguard

The Keyguard is not your average key box it has been designed with safety as well as security in mind. The Keyguard is able to take both KEYS and CARDS and is available with or without alarm facilities, either battery powered alarm or simply as a single pole micro switch making it suitable for many applications. The window is designed in such a way that it cannot be refitted after removal. The Keyguard plastic window enables it to be used in such areas as schools, food preparation areas and swimming pools. There are no shards of glass or sharp edges that could cause injury.

K1000

The Keyguard K1000G and K1000R are the standard version with no alarm or switch.

K1010

The Keyguard K1010G and K1010R have an integral audible alarm that is powered from a PP3 Alkaline battery (supplied). If any attempt is made to remove the plastic window, then the alarm is sounded. The alarm can only be silenced by fitting a new window.

K1020

The Keyguard 1020G and K1020R are fitted with a single pole changeover contact microswitch. This switch is terminated and is voltage free for connection to the user's own equipment. The contacts for these key boxes are rated at 10A 240vac, however they should only be used at low voltage less than 48vdc. The case of the Keyguard is not designed to enclose mains voltages.

K1030Gr

Keyguard spare plastic windows are available in packs of four and are printed with graphical user instructions making the Keyguard truly multi lingual.

Benefits and Features

- Snatch off plastic Window
- Can be wired into existing Alarm Systems
- Integral Electronic Alarm 90db K1010 only
- Stores Both Keys and Cards
- Ideal for restricted Access Areas
- Plastic Window makes the keyguard the ideal choice for Food Preparation areas
- Widely used by fire exit doors, in computer rooms, for master key storage and other situations where a key or card needs to be kept safe and secure
