

DRAINAGE SERVICES

CORE SERVICES

JETTING

Blocked drains are unpleasant and can cost you a lot of money and time if the issues aren't addressed

straight away. Aside from the pungent smells and poor drainage that comes with blocked drains, it can also pose a health hazard due to the amount of toxic waste that is often found within a blockage. Sometimes these blockages can usually be cleared by High Pressure Water Jetting if this doesn't work it can mean that there is an underlying problem that can be caused by a damaged pipe.

Audez have a skilled team of drainage specialists on hand to help you to identify and fix the problem quickly. We have over 25 years' experience working with both commercial and domestic clients.

C.C.T.V.

Our CCTV drain surveys let us take a closer look at the problems with your drain, whether it's drain damage, a

blocked drain or something else.

Once the camera survey is completed our engineers can provide the results of your camera survey and will help you decide about what works to have carried out. Camera surveys sometimes uncover small faults that, when handled early on, avoid the need for costly repair work in the future.

For commercial premises we recommend regular maintenance checks to nip problems in the bud before they become emergencies.

Our range of CCTV Cameras are able to survey drains from 75mm - 1200mm in diameter. Each camera comes fitted with a sonde allowing drain tracking to take place above ground.

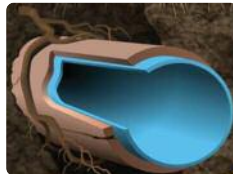

LINING

Drain lining, also known as cured-in-place pipe (CIPP) lining, is a popular method for repairing damaged or

deteriorating drainpipes without the need for extensive excavation. This method involves inserting a liner impregnated with resin into the existing pipe. The liner is inflated, and the resin hardens, creating a new, smooth, and durable inner pipe surface. Here are some key advantages of drain lining:

Patch lining is a specialized method used to repair localized damage or small sections of a drainpipe. It is an effective solution for addressing cracks, fractures, and minor issues in drainpipes. Here's why patch lining is a valuable repair technique:

The choice between drain lining and patch lining will depend on the specific issues your drainage system faces. A professional inspection and assessment by experienced technicians will help determine the most suitable method for your situation.

SAFETY

At Audez, Health & Safety is our main priority when working on site.

Providing safe & responsible working practices for our drainage engineers & ensuring the safety of everybody in the working vicinity.

All drainage engineers have a valid CSCS card along with valid confined space certification.

We practice safe working by placing barriers around open manholes along with the Manhole Guardian, which allows increased safety & protection around the manhole whilst still allowing access for our engineers and is intended to reduce the risk when actively working on the manhole.

Entry into manholes is via certified tripod & winch systems along with certified tested gas monitors and 10-minute escape sets.

Risk Assessments & Method Statements are provided prior to work commencing and are available to download from our website.

Our priority is that everybody goes home after a day at work.

OUR EXPERIENCE

Audez is a family run drainage company with over 25 years of experience in the external drainage & cleaning sectors and are committed to providing a quality service for our customers to create long term relationships. With our professional & respected employees, Audez can provide solutions to your external drainage needs.

WHO WE ARE

Audez Drainage, we are a team of experienced drainage contractors committed to providing top-quality drainage cleaning services to our clients, from a Blocked Drain to No Dig Repairs, we take pride in our work and always strive to exceed our clients' expectations.

Our fleet of vehicles can cover London, Kent, Surrey, Sussex, Hampshire, Berkshire, Buckinghamshire, Hertfordshire & Essex.
