Standard Enduramaxx tanks are supplied with a 2-year warranty.  
 \* To extend this warranty to 10 years simply complete the online registration process [enduramaxx.co.uk/warranty](http://enduramaxx.co.uk/warranty).  
 Unless specified on the order form e.g. where the tank is used for non-recommended purpose.  
 Terms and conditions are available online.

# WELCOME TO ENDURAMAXX

## The UK'S leading manufacturer of rotationally moulded tanks and liquid storage containers.

Enduramaxx stands as the foremost plastic water and chemical tank manufacturer in the United Kingdom. Our extensive product range encompasses water tanks, chemical tanks, water bowzers, and tanks designed for a variety of agricultural, industrial and construction applications. Whether underground, above ground, open top, cone shaped, slimline or squat we manufacture numerous sizes and shapes of tanks to serve a diverse customer base across various industries throughout the UK.

### Customised options

We are committed to providing a seamless, responsive, and customer-centric experience. While we offer swift nationwide delivery for ready-made products, our manufacturing capabilities open the door to clients seeking tailored solutions. Our in-house CAD and fabrication teams collaborate closely to deliver customized and efficient answers, even for the most intricate projects.

### Unparalleled quality

With ISO 9001 and UKAS accreditations, we firmly back our unparalleled quality and product guarantees, assuring clients of complete peace of mind when selecting, procuring, and installing Enduramaxx products.

### Robust and long lasting

Our tanks are rotationally moulded at our factory in Lincolnshire. This method involves filling a heated hollow mould with a precise weight of polymer, followed by a slow rotation process. The result is a robust, long-lasting, and UV-stabilized tank that can provide many years of service, whether installed indoors or outdoors. Additionally, we source accessories, including fittings, flanges, and filters, to complement our tanks.

### Made in Britain

Enduramaxx is proud to be a part of the "Made in Britain" initiative, and investing in one of our plastic tanks is a direct investment in British manufacturing. All our tanks are constructed from either medium-density polyethylene (MDPE) or Polypropylene (PP) ensuring a robust and resilient tank fit for the product it contains.

# VERTICAL WATER STORAGE TANKS

## POTABLE AND NON-POTABLE WATER STORAGE

Drinking water, water storage and rainwater harvesting systems

### POPULAR USES

- For bulk water storage back-up
- Emergency drinking water supply
- Temporary water supply for events and festivals
- Ideal for harvesting rainwater from your roof
- Storage for water extracted from bore holes
- For use as fire sprinkler and fire prevention water storage tanks.

### TANK FEATURES:

- Single rotational mould for strength
- Impact and corrosion resistant
- Heavy-duty and 100% rust proof
- Mid density polyethylene (MDPE)
- 1.0 SG - suitable for water storage\*
- All vertical tanks can be specified as CAT 5 (see page 14)
- Potable tanks made from WRAS approved polymer.

\* Specific Gravity (SG) is the relative density of the liquid. Water has a specific gravity of 1.0 SG. Substances with SG greater than 1 are heavier than water

# RAINWATER HARVESTING

## Take the strain off the mains and boost your sustainability!

Harvested rainwater reduces your reliance on mains water and improves your environmental footprint.

Integrating an Enduramaxx rainwater harvesting system to capture and store the run-off from your roof makes the most of this invaluable resource.

And, with water bills reportedly set to rise by approx 40% by the end of the decade, rainwater harvesting means your demand for treated mains water will reduce, making rainwater harvesting both a sound financial and environmental investment.

### Popular uses for harvested rainwater

- Garden and plant watering
- Toilet flushing
- Machinery / vehicle wash down
- Crop spraying
- Livestock drinking
- Fire prevention.

### Getting started:

#### 1. Determine Your Rainwater Needs:

Calculate the amount of rainwater you want to store and the potential harvest from your roof.

#### 2. Calculate Your Annual Usage:

Estimate your yearly water consumption based on your current water bill.

#### 3. Choose the Right Tank:

Select a suitable location for your tank, measure the available space, and pick the appropriate tank size.

### How a rainwater harvesting system works.

Simply connect the system to your guttering downpipe.

- |                               |   |
|-------------------------------|---|
| ① Gutter collecting rainwater | ④ Siphon overflow                             |
| ② Two-stage pre-filter        | ⑤ Calmed inlet                                |
| ③ Filtered rainwater          | ⑥ Dirty water and debris to soakaway or drain |

### Follow this simple calculation to determine your needs:

Roof area (footprint) in  $m^2$  x annual rainfall in  $m^3$ .  
e.g. roof area  $450m^2$  and average annual rainfall of  $0.65m^3$  (or  $650ml$ )

$$450 \times 0.65 = 292.5m^3$$

$$292.5 \div 12 = 24.375m^3$$

This translates to an average of 24,375 litres per month average.

We recommend storing an average of two to three months' worth of rainfall (bear in mind you may get three months' worth in your wettest month). In the above example you would require 2 or 3 x 25,000L tanks linked in series along with a 2" connection kit and a rainwater harvesting filter kit B.

**HARVEST  
EVERY  
DROP**

Enduramaxx Vertical, Static and Underground tanks are all suitable for rainwater harvesting.

#### Rainwater Harvesting System

- Basket or two stage pre filter
- Calmed inlet to prevent incoming water disturbing any sediment
- Siphon overflow

#### THREE FILTER KITS to match your roof area:

**Filter Kit A**  
200m<sup>2</sup> for tanks  
1,250 to 10,000L  
Suitable for  
4" downpipe  
CODE: 254010

**Filter Kit B**  
450m<sup>2</sup> for tanks  
5,000 to 20,000L  
Suitable for  
4" downpipe  
CODE: 254020

**Filter Kit C**  
800m<sup>2</sup> for tanks  
5,000 to 30,000L  
Suitable for  
4" or 6" downpipes  
CODE: 254030

All kits also include  
a calmed inlet and  
siphon overflow

Calmed inlet

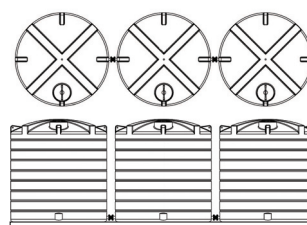

Siphon overflow

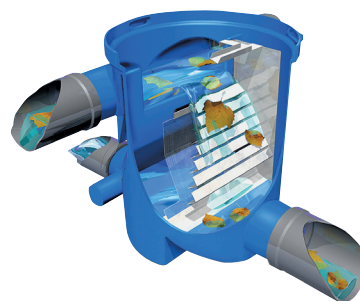

Multiple tanks can be linked  
to increase capacity through  
our simple connection kits

**SET UP YOUR TANKS  
SO THEY FILL TOGETHER**

Tank connection kit (to join tanks)

Kits B & C are two  
stage pre-filters

# TRANSPORT TANKS

## POTABLE AND NON-POTABLE MOBILE WATER STORAGE

Heavy duty, 1.5 SG horizontal transport tanks, and 1.0 SG squat tanks, are highly impact resistant, are easy to fill and are designed to mount onto flat surfaces. They use a unique pin mounting system i.e. they do not need a mounting frame or steel mounting straps.

TANK ONLY (WITHOUT FRAME)

# WATER BOWSERS

## SKID AND TOW MOUNTED

Complete transport solutions for water transport where no mains water connections are available.

### POPULAR USES

- Livestock and equine watering
- Large gardens and amenity
- Dust suppression.

### FEATURES;

- UV stabilised rotationally moulded tank
- Galvanised frame with pneumatic tyres (tow mounted only)
- 1" bottom drain outlet for drainage and cleaning.

*Note; pumps not supplied*

# UNDERGROUND TANKS

## POTABLE AND NON-POTABLE WATER STORAGE TANKS

Offering space-saving underground storage for rainwater, spring or borehole water as well as for potable water.

Ideal for many domestic, amenity, commercial, agricultural and industrial applications. Can be earmarked as fire sprinkler tanks for the storage of water in case of a fire emergency.

# STATIC TANKS

## POTABLE AND NON-POTABLE WATER STORAGE

Designed for space restricted areas, horizontal, above ground, static storage tanks are rotationally moulded for strength.

### POPULAR USES

- Rainwater harvesting from low roofs
- Swimming pool backwash tank
- For installing behind walls and fences for out-of-view storage
- For storage when height is restricted.

# SLIMLINE AND BAFFLED TANKS

## UPRIGHT OR HORIZONTAL

Designed for space restricted areas, such as house basements. Baffled tanks are also ideal for water transportation.

Like baffle balls, the baffles stop the water sloshing from side to side during transport (see page 9).

Frequently used for water transport by car valeters and window cleaners.

# CAT 5 TANKS

*The air gap creates a separation between the mains water supply and potentially contaminated water in the tank, providing maximum protection against back pressure backflow. Enduramaxx CAT 5 tanks meet Water Regulations requirements for Category 5 fluids.*

## What is a CAT 5 tank?

A Type AB Airgap Break Tank for Category 5 Backflow Prevention. Where type Type AB refers to the non-mechanical backflow prevention, which includes the screened weir overflow on either side of the turret wall, or, more commonly known as a CAT 5 Tank.

## When do I need a CAT 5 tank?

Whenever you need to comply with Fluid Category 5 regulations i.e. if there is a risk of backflow into the mains water from a CAT 5 solution or fluid.

## What is a CAT 5 fluid?

CAT 5 fluids represent a serious health risk due to the concentration of pathogenic organisms or highly toxic or radioactive substances present within them. This can include animal or butchery waste, faecal matter or other human waste, or pathogens from a range of other sources. Examples of environments that require these solutions include urinals, laboratories, drain cleaning plants, industrial cisterns and bin stores.

## Why are the Water supply (water fittings) regulations and Scottish water byelaws important?

They set legal requirements for the;

- Design
- Installation
- Operation and maintenance of all plumbing systems, water fittings and water-using appliances.

They play an important role in protecting public health, safeguarding water supplies and promoting the efficient use of water within customers' premises across the UK. The regulations are to prevent misuse, waste, undue consumption or erroneous measurement of water and, most importantly, to prevent contamination of drinking water.

## Do CAT 5 requirements apply to me?

Find out by seeking professional guidance from your local water company. They will have a technical team who provide guidance to ensure your water storage system is compliant with regulations.

Enduramaxx advise that before investing in proposed work, you have approval from the required regulatory bodies such as building regulations or local water board.

We also recommend that you specify and use approved products and obtain manufacturer certification as well as using qualified contractors.

# BATCH / BRINE MIXING TANKS

## CHEMICAL AND FOOD GRADE

Manufactured using food-grade, UV stabilised polyethylene for food mixing and blending applications and designed for the containment of liquids up to a specific gravity of 2.0 SG. These long-lasting, corrosion-resistant tanks provide maximum options for batch mixing, storage, dispensing & material handling.

There are three option of lids. Removable lid for storage of liquids and brine, hinged lid for mixing applications and bolt-down lid for fuming products.

- Standard tank 1.5 SG, can be specified for containment of liquids up to 2.0 SG
- Hinged or removable lid
- Food safe/WRAS approved polymer
- Bolt down lids - POA.

# CHEMICAL DOSING TANKS & BUNDS

## CHEMICAL AND FOOD GRADE

Specifically designed for use within water treatment, purification, chemical dosing and storage applications, where a dosing system has been designed to automatically and precisely inject chemicals into the water stream.

Enduramaxx cylindrical chemical dosing tanks include an elevated flat platform to mount chemical metering pumps onto the top of the tank.

- standard tank 1.5 SG, can be specified for containment of liquids up to 2.0 SG
- Elevated flat platform to mount chemical metering pumps onto top of tank
- Food safe/WRAS approved polymer.

## BUNDS

Available separately and designed to have a larger capacity than the chemical dosing tank it is holding so it can contain the full contents of the dosing tank if it becomes compromised.

# CONE TANKS AND IBC HOPPERS

## FOR A COMPLETE DRAIN

Our cone bottom tanks and hoppers are available with closed or open tops, offer choices of 5, 15, 30, 45, 50, 55 and 60-degree cone base, providing the ultimate solution for applications that require a complete drain.

### CLOSED TOP

### Cone Bottom Tanks and hoppers with frame

Can be supplied with customised fittings, flanges, pipework and other accessories to meet your requirements.

### POPULAR USES

- For cider & beer brewing, wine making and other food or drink storage
- Industrial holding tank
- Chemical storage
- Process water and water treatment
- For high volume compost tea
- Pellets, granules and powders
- Nuts and animal feed
- Wood chip, biofuel and sawdust.

#### CLOSED TOP CONE TANK WITH FRAME 1.5 SG

## OPEN TOP Cone Bottom Tanks and hoppers with frame

Supplied without lids for total access.  
Can be supplied with customised fittings,  
flanges, pipework and other accessories to  
meet your requirements.

### POPULAR USES

- For blending and mixing
- For clarification and settlement applications.

*N.B. Closed and open top cone bottomed tanks are available without frames.*

## IBC TOTES & HOPPERS

Used for in-plant handling of powders and granules in pharmaceutical, food and chemical processing, for the safe and reliable transportation and storage of liquids. The conical shape and smooth, seamless interior surface promote the flow of contents.

These plastic tanks (open or closed top) are supplied as standard with a heavy-duty galvanised steel support frame. Castors and stainless steel frames can be specified.

# INDUSTRIAL WATER & CHEMICAL TANKS

HIGH DENSITY LIQUID CONTAINMENT

Industrial water and chemical tanks serve a variety of purposes.

They are strong and non-reactive with the chemicals they contain.

Tanks are manufactured from either polyethylene or polypropylene depending on the chemical and temperature at which the liquid is being stored.

Enduramaxx offer the ability to supply bespoke storage packages for chemical tanks based on application requirements.

## POPULAR USES

Storage of:

- Ferric Sulphate and Ferric Chloride
- Sodium hypochlorite
- Aluminium Sulphate
- Polymers such as Polyanionic Cellulose (PAC)
- Liquid Fertiliser
- Animal feed grade liquid molasses.

## TANK FEATURES:

- Available for 1.5 SG or 2.0 SG product
- Customised fittings and outlets available including BSP sockets and PN16 flanges
- Liquid level assemblies, fill pipes and suction pipes are available terminating in BSP and flanged connections.

# LIQUID FERTILISER TANKS

As the leading plastic tank manufacturer in the UK, Enduramaxx liquid fertiliser tanks are made from heavy duty, 1.5 SG robust, medium density polyethylene. They are ideal for liquid fertiliser with a specific gravity of typically 1.3 SG.

## FEATURES:

- ① Level gauge (optional)
- ② Secure plastic lid 620mm
- ③ Mushroom vent
- ④ Moulded lugs in roof for easy lifting
- ⑤ Thick plastic walls
- ⑥ 2" Stainless steel bolted outlet with optional lockable ball valve
- ⑦ Bolt down feet for anchoring
- ⑧ Concrete bund (not supplied)
- ⑨ Reinforced 8" concrete base. (not supplied)

Check with DEFRA/ AIC for current safety requirements. We recommend installing liquid fertiliser tanks within a protective bund and to anchor the tank securely to the ground to prevent it tipping over in high winds or floating within the bund after heavy rainfall.

# OPEN TOP TANKS

## TOTAL ACCESS TANKS

Open top water tanks are available in a range of sizes from 150 to 25,000 Litres with a choice of 1.0 SG, 1.5 SG or 2.0 SG density. Tanks up to 1,500 Litres are supplied with removable lid. Made from WRAS approved polymer and can be used for foodstuffs.

### POPULAR USES

- Low profile tanks for aquaculture - fish holding, quarantine or as fish ponds
- For secondary containment of liquids
- For blending mixing and dipping.

Customisation available, including fitting of flanges, pipework and other accessories
