Guide to... RAINWATER HARVESTING

WASTE
WATER

CLEAN
WATER

CHEMICAL

Harvest rain. Store smart. Save water.

How it works:

1. Collect rain from your roof.
2. Filter removes debris.
3. Calmed inlet reduces sediment disturbance.
4. Water is stored in a opaque tank to prevent algae.

Ideal for agricultural, commercial & domestic use.

Two stage pre-filters

Removes debris from rainwater before entering the tank.

Filter Kit B

Roof area up to 450m²
For tanks 5,000 to 30,000L.

Filter Kit C

Roof area up to 800m²
For tanks 5,000 to 30,000L.

Scan the QR code to download the UK's No.1 Rainwater Harvesting Guide.

HOW MUCH WATER COULD YOU SAVE?

Step 1 - $\text{Roof Area (m}^2\text{)} \times \text{Annual Rainfall (mm)}$
e.g. 450m² e.g. 650mm = 0.65m³

Step 2 - $\text{Divide total by 12} = \text{Average monthly rainfall capture}$

Potential Collection

e.g. 292,500L/year 24.375 or 24,375L/month average

In the above example you would require 3 x 25,000L tanks in series.
