

Terence Barker Ltd

An A4 Plus Case Study

With over 60 years of experience, Terence Barker Ltd is a leading manufacturer of bunded fuel storage tanks. They specialise in designing, manufacturing and installing bespoke bunded fuel tanks to meet any specific needs from domestic heating to industrial applications. Beyond fuel, they also manufacture tanks for various liquid storage needs such as water, ethanol and oil.

How Did We Help:

A4 Plus helped Terence Barker Ltd by seamlessly stepping in to complete their project of an underground fuel storage tank and dispensing units, after the unexpected departure of their draughtsman. A4 Plus efficiently assessed the project requirements demonstrating a comprehensive grasp of the business needs and project specifications, provided multiple solutions tailored to the client's preferences, and completed the task within the allocated time frame and budget.

Having unexpectedly lost our draughtsman mid project I searched the internet for a local company that could pick up 'others' work, amend, and complete a set of specific drawings.

A4 PLUS asked very direct questions and offered a couple of solutions dependant on detail required, they confidently demonstrated an understanding of our business and the project requirements and completed the task effectively and efficiently both within the time schedule and budget allocated. We would be very happy to use A4 for any projects that we win in the near future.
