# About SFL Mobile Radio

SFL Mobile Radio are leading suppliers of radio communication solutions. With over 30 years' experience our portfolio of services includes everything from basic back to back 'walkie-talkie' systems to fully integrated voice and data set-ups. As one of the largest suppliers of radio communication equipment in the country we are a recognised Motorola Solutions Platinum Partner and established reseller of Hytera, Kirisun, Kenwood, Mitex and Entel radio communication equipment.

With both hire and purchase options available we are able to work alongside our customers to understand their requirements and supply the best possible solution both operationally and commercially. With a team of 50 staff across offices in the Wirral, London and Milton Keynes, we supply to the whole of the UK and are able to offer nationwide next day delivery.

# Equipment

SFL Mobile Radio offer a wide range of equipment and innovative solutions. As partners, we mainly supply Motorola, Hytera, Peltor, Kirisun and Kenwood equipment, however if you require another brand we will be able to source this for you.

## Unlicenced Equipment

If you don't require licenced equipment, we supply a large range of PMR446 equipment that is ready to use straight out of the box with no programming or licences needed.

Kenwood TK-3501

Motorola T82

## IoT Smart Sensors

HALO Smart Sensor enhances workplace health, safety and environmental monitoring by detecting health hazards, vape and smoke. Perfect for environments where CCTV isn't suitable such as bathrooms and changing rooms.

HALO 3C/3C-PC

HALO Cloud

## Licenced Equipment

If you require further range or are in a built up area with risk of interference then licenced equipment is likely to be the best solution for you. Our hire fleet is 100% comprised of modern digital Motorola licenced radios.

Motorola R2

Kenwood NX-1300DE3

Motorola R7 FKP

## Bodyworn Cameras

Used across multiple sectors, bodyworn cameras are now used to help keep workers safe, ensure compliance and collect evidence. SFL Mobile Radio are able to offer solutions for a varying range of budgets and requirements.

Motorola V200

Motorola VB400

Hytera GC550

# Extended Coverage

## Repeaters

Where there is a requirement for radios to cover a wide area or for the signal to go through certain materials a repeater is used which allows the signal to be carried further. SFL Mobile Radio can carry out a site survey to assess your requirements as well as advising and installing the best set-up.

## Push to talk over cellular

Where there is a requirement for extra long range communication, SFL Mobile Radio can provide a solution that operates over LTE (4G) or over WiFi.

Using this system allows for push-to-talk function, that those who use two way radio will be familiar with. However, with the system operating over LTE as opposed to RF, a communcation link will be available wherever there is signal. Therefore this PTToC is ideal where operators need to communicate across large distances and multiple sites.

A range of options are available including Motorola WAVE.

Motorola TLK110

Motorola TLK25

"All of our engineers are fully qualified and hold Motorola Solutions Elite Specialist status."

# Radio Features

There are a number of innovative features available to enhance the user experience of your radios. SFL's expert consultants are available to advise you on the best set-up for your requirements.

- **Lone Worker**
- **Text Messaging**

# Radios For Education

Education is one of SFL Mobile Radio's largest sectors. Having supplied two-way radios to educational establishments across the country for more than 25 years, SFL are ideally placed to understand the communication requirements of schools, colleges and universities and deliver the best possible solution. With a state of the art hire fleet of 5,000+ digital Motorola radios, we operate nationwide offering next day delivery, free 24 hour exchange if there is an issue. We are a trusted supplier to the education sector.

Motorola R2

Motorola R5 LKP

Motorola R7

## Education Centres we have worked with:

Lincoln College University Centre

University of Reading

Westminster School

King Edward VII School

University of Strathclyde Glasgow

**Senior Lecturer - University of Central Lancashire**

"We use the radios to improve the authenticity of clinical simulations developed for student paramedics at the university. The students are sent to various simulated incidents via radio comms, as they would when on placement with the ambulance service. This also helps to develop the students' confidence and communication skills when using the radios."

## What our customers say about us

"The radios have made a massive difference to our staff. The improved audio quality and encrypted frequencies means that we can hear each other better and know that no-one can listen in to us.

The Excel sheet matrix for the radio names was sent out promptly and the radios themselves were labelled with the names so it was easy to identify which radio was which."

**Premises Manager - Shaftesbury High School, London**

"Our current campus dates back to 1903 and it's spread across a forty-five acre estate. The school can now instantly communicate with support services no matter where they are. SFL have been excellent, no issues, they have ticked all the boxes in terms of what we were trying to achieve. It's brought the community closer together."

**Head of Estates, Bury Grammar School**

"We recently purchased an additional set of radios, which we needed to integrate with our existing older model. SFL was very helpful in recommending the correct model for our needs and we have been extremely pleased with the results. They work seamlessly with our existing handsets and we have already used them for multiple events. Very happy and would recommend!"

**Events Manager - Wellington School, Somerset**

# Radio Features Ideal For Education

Educational establishments are busy, complex environments where communication is vital for both daily operations and emergency response. There are specially designed features available that can enhance the safety and security of students, staff and visitors who rely on these communication systems. Some of these key features have been listed below:

## Emergency Alerts

In educational environments, the safety and protection of children and vulnerable adults is paramount. Emergency alert systems provide instant communication when medical or physical intervention is urgently needed. With the press of a single button, staff can immediately notify security teams, senior management, and emergency responders of critical incidents. These priority broadcasts override all other radio traffic, ensuring emergency communications reach the right people without delay, whether it's a playground accident requiring immediate first aid or a situation requiring safeguarding intervention.

## Text Messaging

Staff can send and receive text messages using the radio network, providing a silent and discreet method of sharing information without disrupting students.

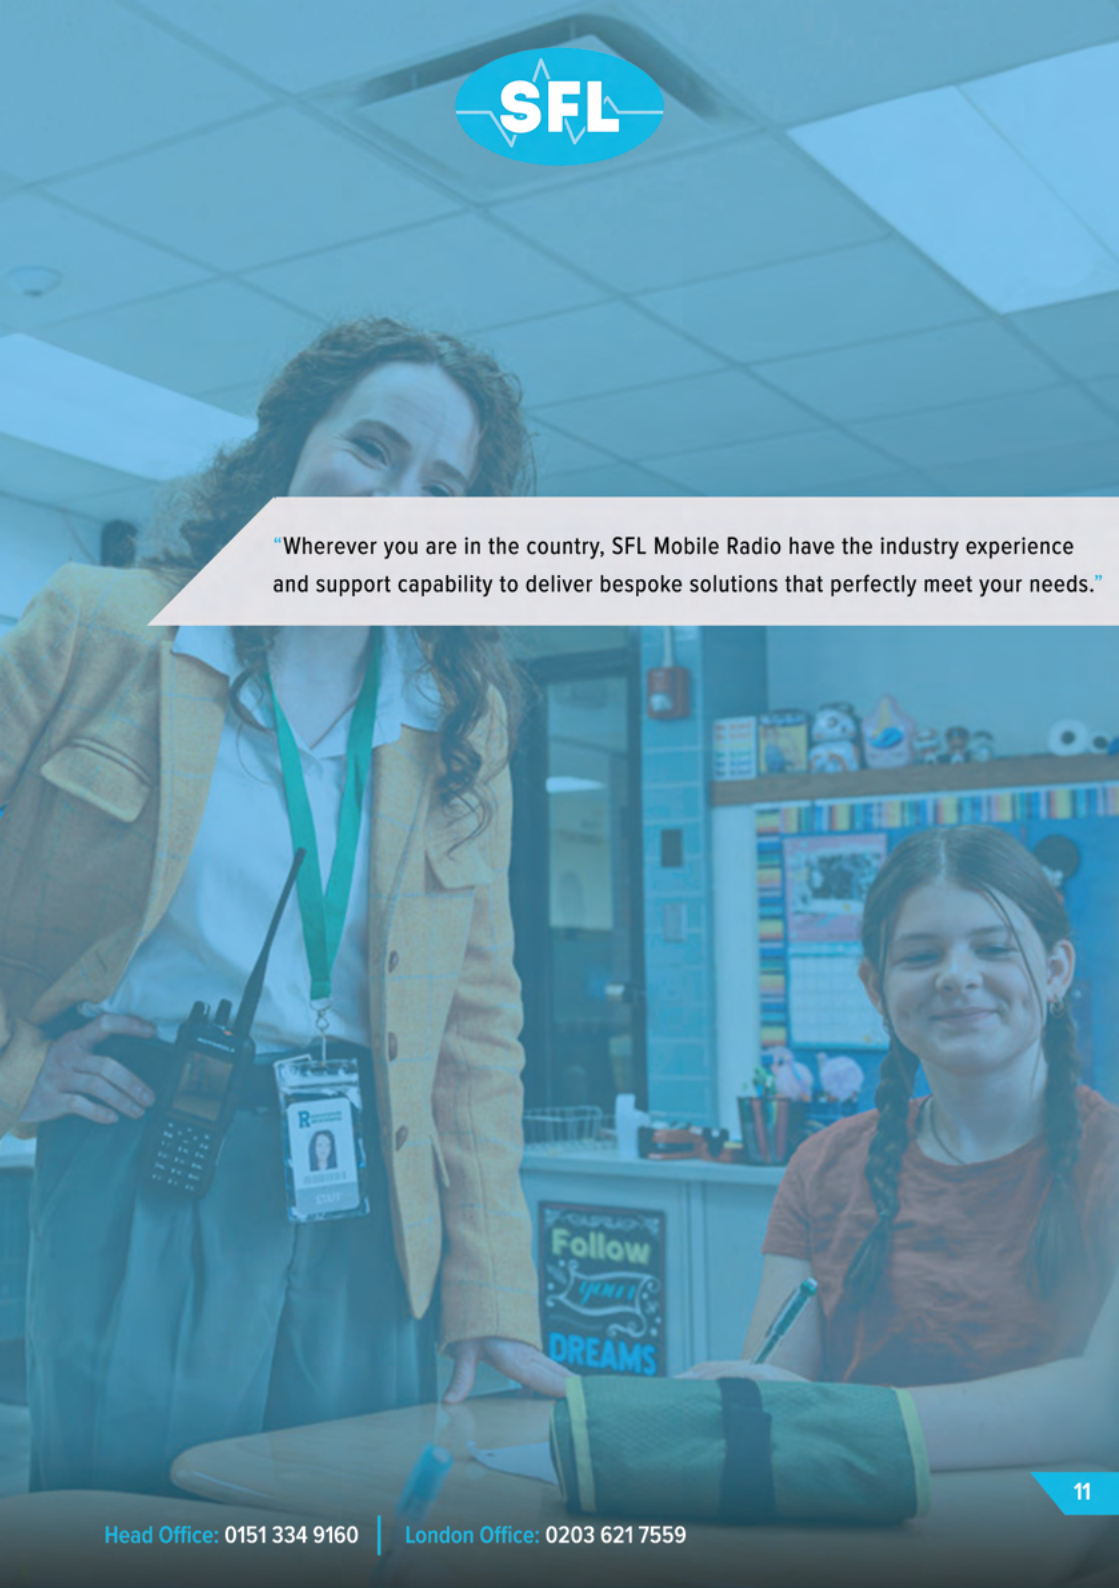
## Encrypted Channels

Encrypted digital channels ensure that critical communications remain secure and cannot be intercepted by unauthorised listeners. This protection is essential when discussing vulnerable students, coordinating responses to sensitive incidents, or sharing confidential information between senior staff.

## Noise Cancellation

Educational settings present unique audio challenges, from bustling canteens and sports halls to outdoor playgrounds and busy corridors. Advanced noise cancellation technology filters out background sounds, ensuring clear communication even in the noisiest environments. Staff can receive and transmit critical messages without having to shout over classroom activities, assembly noise, or playground chatter.

Head Office: 0151 334 9160 | London Office: 0203 621 7559



"Wherever you are in the country, SFL Mobile Radio have the industry experience and support capability to deliver bespoke solutions that perfectly meet your needs."
