

## Silicone Gas Cylinder Heater

Our Silicone Gas Cylinder Heater is a game-changer for industries relying on stable and efficient gas supply. Whether you're involved in rolled roof installation or other applications, this heater ensures that your gas cylinders deliver optimal performance regardless of external temperatures.

The silicone heater increases flow from LPG cylinders. By adding heat directly to the cylinder, the silicone heater maximizes LPG vaporization, ensuring that your supply lasts longer and works better, even under high demand.

The heater is designed with safety and convenience in mind. Equipped with a 40°C limiter and a 55°C safety fuse with manual reset, it guarantees safe operation without the risk of damage to the cylinder.

Installation is a breeze, thanks to a spring-mounted design that ensures a perfect fit around standard-sized gas bottles. The spring-mounted design has extra support so the heater will not move after being installed.

### Silicone Gas Cylinder Heater

- Size: 890 x 120mm
- Voltage: 230V
- Wattage: 500W
- Compatible with 22kg and 33kg standard size gas bottles
- Spring mounted for perfect cylinder fit
- Features a 40°C limiter and a 55°C safety fuse with manual reset
- Part Number: 23-4407

Ideal for a myriad of applications, this heater ensures optimal gas flow by maintaining adequate pressure, even in the coldest temperatures.

Crafted for durability, flexibility, and safety, it's the perfect addition to any setup requiring reliable gas usage.
