

Electric Turntable Trailer 1000kg

Specification

Capacity	1000kg
Chassis Material	Steel
Wheel Diameter	405mm
Base Height	550mm
Overall Height	1310mm

Product Details

Like all our Electric Powered Trolleys, this trolley is installed with an electric motor that is linked to the handle for simple and easy use by the operator. All you need to do is lightly press the adjustable throttle and let the trolley do the work.

With chunky 400mm wheels, this powered trolley is tougher than it's 500kg capacity little brother, with a UDL capacity of up to 1000kg.

Like so many of our trolleys, the 1 ton powered trolley has a frame made using a single piece of steel box section, ensuring the maximum strength and rigidity and ensuring high resistance to damaged compared to simple angle iron equivalents.

Safety Features

Using the controller, the trolley has a number of safety features to ensure safe use of the trolley.

The handle controller features a large emergency stop button, allowing the operator to quickly bring the trolley to a complete stop in case of emergency. When the throttle is released, the deadman braking system is activated, locking the motor wheels and preventing the trolley from moving.

Pressing the throttle once more disengages the brakes and reactivates the powered drive, reacting to the power from the throttle. Optional extras are also available by way of safety beacons, warning horns, corner bumpers and more, providing you the means to go above and beyond your health and safety requirements.

Product Code	Size	Capacity
HI-POW-T1000-1585	1500 x 850mm	1000kg
HI-POW-T1000-1885	1800 x 850mm	1000kg
