Specification

1.5 Tonne Manual Transmission Jack

We supply strong durable transmission jacks that will provide years of trouble free service. Designed and manufactured for use in a pit or under post/column lifts. They can be used to remove and install engines, gearboxes etc.

The jacks are designed and manufactured for long lasting reliability and ease of use. A foot pedal operated hydraulic pump allows for an easy effortless lift and hands free operation. Precision engineered valves allow for controlled lowering. High Quality Castor wheels and side handles allows the units to be easily moved.

The Jack comes with 2x ratchet straps to secure the gearbox in place when lowering or moving. The top square plate is a universal design with moveable quadrants & the slots allow modifications to be made by the user to accommodate different gearboxes.

A proven reliable and well engineered premium product at a realistic cost effective price.

Dimensions – Height (Min. 850mm. Max 1945mm) Width 850mm. Depth 800mm.
