- Healthcare
- Restaurant and bars
- Many more

What is VueText™?

The VueText™ display is compatible with call buttons, CaptureCall™, and POCSAG pager systems. VueText is useful in restaurants, hospitals, factories, pubs, and other sectors across the UK. When compared with other call screen systems on the market, VueText offers a number of advantages in terms of managing, exporting data and recalling employees

CaptureCalls' integration with VueText allows management to view when a screen was paged and how long it took for staff to respond, allowing them to improve staff performance.

- 32 character display
- Alerts with a loud sound when paged
- Suitable for sectors where pagers are not always suitable
- Compatible with all LRS equipment
- When integrated with CaptureCall™ data is available
- 60cm Wide, 15cm Height and 3cm Depth

How can VueText™ benefit your business?

VueText LED page receiver is perfect for communicating with staff who are not always able to look down at a individual pager.

In a environment where individual staff pagers are not practical the VueText LED display can be used to notify staff that they are needed or to inform staff that there is a faulty machine by using dry contacts.

- LED Page Receiver available for all sectors across the UK.
- Quickly communicate with staff.
- Cost effective solution to improve staff response times.
- Integration with OptiCall™ and CaptureCall™

VueText™ Integration with Call Buttons for Opticians

OptiCall™ can be integrated with VueText so that when an optician presses the button, the LED screen shows the message. This eliminates the need for staff to have multiple pagers in the store.

The staff member who has attended the call simply swipes a magnet over the OptiCall™ button, which alerts other staff that the job has been completed.

When integrated with our CaptureCall™ software, management will be able to see exactly how long customers have been waiting and how quickly staff are responding to the calls. As a result of analysing the data that CaptureCall™ produces, you can improve staff response times, improve customer satisfaction, and boost store sales.
