

The Aquafeed™ Self-watering System

Amberol pioneered and developed a unique Self-watering System called Aquafeed™

A series of high capacity capillary action wicks “suck” water up from a sub-soil water reservoir onto a dispersal mat. This dispersal matting distributes the water evenly to the compost overlaying it, keeping it optimally moist at all times.

As a result, evaporation is kept to a minimum and plant roots absorb only the water they

need, thereby keeping plants healthy and strong for longer. The Self-watering Amberwall needs only be topped up once or twice a week.

Aquafeed™ helps to save precious water resources. You also save considerable amounts of time and money because unlike traditional baskets they don't need watering daily.

Our aim is to make a visible difference in every city, town and village across the country. This not only includes beautiful floral displays but also recycling bins, litter bins and our recycled plastic 'Benches by Amberol' range.

Amberwall

designed to transform your environment

Amberol's new living wall, the Amberwall, has been designed to transform your environment by creating vibrant ecosystems and increase the availability of green spaces in areas with limited options. Incorporating our Aquafeed™ Self-Watering System into interlocking one meter reservoir units that can be displayed in vertical or horizontal arrangements offers a great low maintenance alternative to connecting people with nature.

Whether you choose to call it a living wall, green wall or vertical garden, all depends on the style of planting you choose, however one thing all of these have in common is the ability to enhance spaces by increasing the green areas around us, which in turn can increase air quality, reduce temperatures and improve your mood.

The Amberwall comes with an easily accessible top filling water port and linked mouldings meaning that once the top moulding is full, the water will cascade down into the lower units, filling as it goes.

The Amberwall consists of a strong lightweight moulding that can be arranged to form groups of living walls from one meter wide, and up to three meters high, and offers four interlocking features for alignment.

Designed and manufactured in the UK the Amberwall can be manufactured from up to 100% recycled* materials and is available in a wide range of standard colours, we also have the facility to match* colours precisely, to reinforce your brand image.

Why not create a "Selfie Wall" with brightly coloured plants and incorporate your hashtag, logo or slogan to create a focal point for Social Media users and strengthen your trending.

*Subject to availability and MOQs

Low maintenance, interlocking units

- The durable double skinned moulding enables storage of up to 6.5 Ltrs of water internally and 14L compost capacity for planting.
- Strong lightweight moulding (6kg) to ease to manual handling and wall fixing, prior to filling and planting
- Easily accessible top filling water port

- The Amberwall is also designed to fit on a standard 1200x1000mm pallet to maximise standard distribution methods.
