CASE STUDY...

ENGLISH MARTYRS CATHOLIC SCHOOL

Roofclad Systems was appointed to carry out a full refurbishment of the flat roof at The English Martyrs Catholic School, Hartlepool.

Following a detailed inspection and specification review, a bespoke roof replacement was designed to meet current Building Regulations, achieving a U-value of 0.18W/m²K.

Works involved stripping existing waterproofing and installing a SIGNature Bituminous Membrane warm roof system with tapered insulation to correct poor falls. New outlets, drainage details, and rooflights were added to improve performance and light levels.

Most of the project was completed during school holidays, with an additional four weeks while the building was in use, requiring strict health and safety controls. Despite challenging weather conditions, Roofclad Systems delivered the project on time and to specification. The project was proudly nominated in the Reinforced Bitumen Membranes category at the NFRC Awards.

If you'd like to work in collaboration with a specialist contractor on your next commercial roofing scheme, don't hesitate to get in touch with the team on 01543 411 855 or email enquiries@roofcladsystems.co.uk

SERVICES INVOLVED:

- Felting & Waterproofing
- Rooflight Solutions
- Guttering Systems

"The Roofclad team managed a complex project within a live school environment, coordinating works safely and efficiently despite challenging weather conditions. The quality of workmanship was first-class, and the project was completed on time and to a very high standard. We were extremely pleased with the outcome and would have no hesitation in recommending Roofclad Systems for future projects."

Ben Chamley,
Quantity Surveyor,
Thornton-Firkin

CASE STUDY...

LEEKES DEPARTMENT STORE, PONTYCLUN

Established in 1897, Leekes, a leading UK retailer of quality home improvement and furnishing products, appointed us to complete a comprehensive roof refurbishment and wall cladding upgrade at its Pontyclun department store in South Wales.

Our works included the safe removal and fully documented disposal of existing asbestos sheeting, followed by the installation of a 150 mm insulated composite roof panel system achieving a U-value of 0.13 W/m²K. Factory-assembled triple-skin FAIRS/GRP/Trilite Ultra 45 rooflights were added to enhance natural daylight, along with new insulated gutter sections for improved water management.

On the main front elevation, we installed an 80mm insulated composite panel wall system (U-Value 0.25 W/m²K). A flat panel was used for aesthetic appeal. Despite the complexity of removing Georgian wire northern lights, our team delivered a safe, efficient solution – ensuring the store remained fully operational throughout the project.

If you are ready to work with a trusted and certified specialist contractor for your next commercial roofing project, contact our team today on 01543 411 855 or email enquiries@roofcladsystems.co.uk

SERVICES INVOLVED:

- Strip & Resheet
- Asbestos Solutions
- Wall Cladding
- Rooflight Solutions
- Guttering Systems

"Roofclad Systems' performance ensured that it was business as usual for our visiting customers throughout the project, reflecting their commitment to excellence and customer satisfaction. The completed works exceeded our expectations and we are delighted with the final outcome."

Gareth Skeet,
Group Buildings Manager,
Leekes

ADVANCED AIR, NORFOLK

With over 50 years of expertise, Advanced Air is a trusted UK manufacturer of energy-efficient air distribution systems and fire safety products. To ensure continued performance and protection of its operations, the company appointed us to deliver a comprehensive roof refurbishment.

Our detailed survey revealed signs of air and water ingress, prompting a full upgrade. The pitched roof was overlaid with new Z rails fixed to the existing purlins, incorporating 240mm insulation to achieve an impressive U-value of 0.18 W/m²K. We then installed 0.7mm profiled metal sheeting for enhanced durability and GRP Class 3 rooflights to maximise natural light

The flat centre gutter was redesigned with a new pitched fall to eliminate water pooling, ensuring efficient drainage. To complete the project, all centre gutters and the office roof section were waterproofed using Soprema's premium three-layer torch-on system, providing long-term weatherproof protection and performance.

If you are looking to collaborate with a trusted and certified specialist contractor for your next commercial roofing project, contact our team today on 01543 411 855 or email us at enquiries@roofcladsystems.co.uk

SERVICES INVOLVED:

- Overcladding
- Felting & Waterproofing
- Rooflight Solutions
- Guttering Systems

"Our project was intricate, requiring a specialist renowned for their expertise in roof refurbishments. After a thorough evaluation, we chose Roofclad Systems for its established track record in handling complex projects. Their unwavering commitment to quality was pivotal in our decision.

Dave Burrows, Senior Manufacturing Engineer, Advanced Air
