FLUX FIRE PROTECTION

Experts in Passive Fire Protection

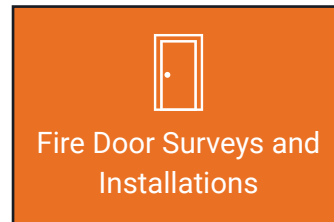

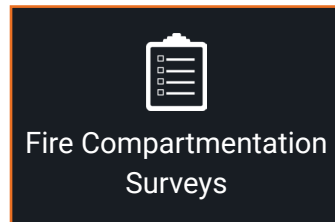

ABOUT US

We are specialists in the supply and installation of passive fire protection systems. We operate from our head offices in Halifax, West Yorkshire, and work nationally on contracts. Supported with third party independent accreditation from the International Fire Consultants (IFC) for fire safety compliance, and with all the industry standard accreditations - Constructionline Gold, CHAS Advanced and Builders Profile.

SERVICES

Flux Fire Protection cover a number of passive fire protection services including:

INTERNAL FIRESTOPPING AND SURVEYS

Flux Fire Protection can attend site during the construction phase to survey works, produce a compartmentation report, and offer a lump-sum fixed price quotation for your project. Or we can price projects from drawings and BWIC hole schedules / M&E schedules and the like. We are flexible on our pricing methodology subject to our clients' requirements.

We can offer our own product specifications for the most cost effective and quickest installations or can work to our clients' specifications if they have certain products they prefer to use.

INTUMESCENT COATINGS

Flux Fire Protection offer intumescent coatings to steelwork. We offer fire protection on structural steel for times ranging from 15 to 120 minutes. Flux Fire Protection adhere to strict record keeping and testing standards with a close working relationship with our paint manufacturers to ensure the correct amount of paint is applied to the steel member to achieve the specific level of protection required for each project.

FIRE DOORS AND SURVEYS

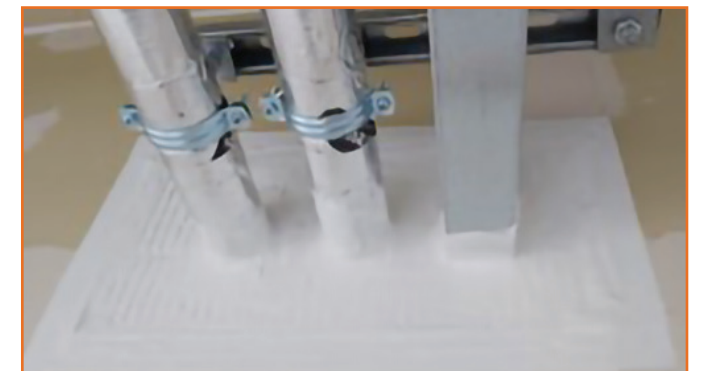

Our team of Certificated Fire Door Inspectors are fully qualified under the Fire Door Inspection Scheme (FDIS) and have been assessed by Exova Warringtonfire, an independent third party. Under the FDIS, we check and test over 25 individual factors and components of your fire doors, issue a certificate of compliance and provide a detailed report on the condition and functionality of each fire door, highlighting any necessary remedial work. We can facilitate replacements and remedial work if required.

ACOUSTIC & AIR SEALING

By utilising specialised materials and techniques, we ensure that buildings maintain optimal acoustics, offering occupants a peaceful and conducive environment.

By minimising air leakage, buildings can maintain consistent temperatures, reduce energy consumption, and improve indoor air quality.

BEAM ENCASEMENT

Flux Fire Protection offer beam encasement services as part of our drylining package to help improve the fire-rating and aesthetic appeal of structural steel. Working closely with our clients we can provide a number of solutions to fit the needs of your projects. The benefits of beam encasement include:

- » Increased fire resistance: Encasing the steel beams in a non-combustible material prevents fire and heat from causing damage to the structure.
- » Aesthetic Enhancement: Beam encasement can improve the overall appearance of a building and tie in with the finishes of the internal partitioning.
- » Cost-effective, robust solution.
- » A fast and effective method to finish structural beams and columns.

FIRE BARRIERS & FIRE CURTAINS

At Flux Fire Protection, we specialise in the installation of fire curtains & cavity fire barriers, providing an essential component of fire protection systems to keep your property safe from the threat of fire. Our team has undergone extensive training to become certified installers of fire curtains, ensuring that we deliver the highest standards of installation and maintenance services.

As accredited installers of FIREFLY fire barriers, we take pride in our ability to offer industry-leading fire protection solutions.
