

FIRE STOPPING

Protecting Compartmentation Integrity Across Your Building

Even the most robust fire compartmentation can be undermined by unsealed penetrations where cables, pipes and ducts pass through fire-resistant elements. OCD FM provides expert fire stopping installation, ensuring every penetration is correctly sealed to maintain the fire resistance of your building's compartment boundaries.

What We Do

Working from Fire Compartmentation Survey findings or contractor specifications, our technicians install approved fire stopping systems at all penetration points throughout your building.

We use a range of tested and certified products, intumescent collars, fire-rated sealants, mineral wool batts, fire pillows and board systems, selecting the most appropriate solution for each application.

All fire stopping is installed in compliance with BS 9999 and relevant manufacturer's tested installation details, ensuring the specified fire rating is maintained at every penetration.

Full photographic records and completion certificates are provided.

Key Benefits

- Prevents fire and smoke from spreading through penetrations in compartment boundaries
- Supports compliance with Building Regulations Part B and BS 9999
- Range of tested and certified systems for all penetration types
- Carried out by trained passive fire protection specialists
- Full photographic records and certification on completion
- Can be combined with our Fire Compartmentation Survey service

Why Choose OCD FM?

Highly experienced, fully qualified fire safety professionals delivering the highest standards of service.

Fully compliant with all current legislative and regulatory standards, giving you complete peace of mind.

Latest technology for efficient service delivery, cost reduction and real-time management information.

Covering all sectors across England: commercial, residential, healthcare, education, hospitality and industrial.
