Test Guide

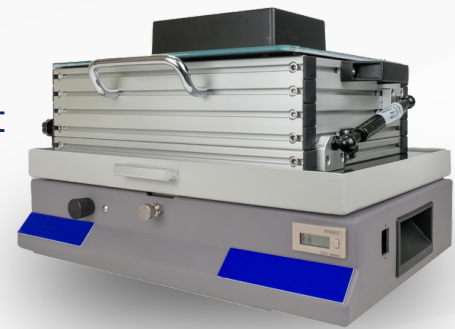

Automotive Capabilities

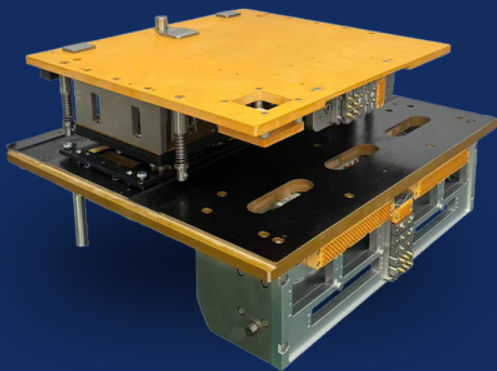

At Forwessun, we understand the unique demands on automotive PCBs and offer advanced testing and functionality, including CAN and LIN Bus communication, to ensure reliability, safety, and compliance with industry regulations.

IN-CIRCUIT

This automotive fixture integrates automatic barcode scanning and board marking functionality. Built to support high accuracy in limited space environments, the solution demonstrates our ability to customise around specific customer needs without compromising on performance.

FUNCTIONAL

A long-standing automotive customer approached Forwessun with a requirement for a specialised Functional Test (FCT) fixture capable of operating inside a high-temperature chamber. As a repeat customer, they were already familiar with Forwessun's engineering capability and trusted us to deliver a complete solution to their high-temperature problem.

CUSTOMISATIONS

At Forwessun, we understand that every PCB and testing environment is unique. Our comprehensive fixture customisation services ensure your test fixtures are precisely engineered to match your specific testing requirements. Whether it's barcode scanning for tracking or automatic-open for automation, our experienced engineers can tailor the fixture to your specific use case.
