

North West Fire Solutions

Specialists In Fire Safety & Risk Management

NW Fire Solutions is a leading provider of fire safety surveys, assessments, and fire safety training across the UK. We help building owners and managers stay compliant, reduce risk, and keep people safe.

Our Comprehensive Fire Safety Services

At NW Fire Solutions, we offer a full spectrum of fire safety services designed to ensure compliance, mitigate risks, and protect lives and property across the UK.

Fire Risk Assessments

Thorough evaluations of your premises to identify hazards, assess risks, and recommend robust control measures in line with current legislation.

Fire Door Surveys

Detailed inspections of fire doors and frames to ensure their integrity, functionality, and compliance, crucial for compartmentation.

Compartmentation Surveys

Expert analysis of fire-resisting structures to prevent the spread of fire and smoke, helping maintain building safety and escape routes.

Fire Strategies

Development of bespoke fire safety strategies for new and existing buildings, guiding design, construction, and operational safety.

Fire Safety Training

Customised training programs for staff, fire wardens, and management, ensuring everyone understands their role in fire prevention and emergency procedures.

Site Plan Drawings & Evacuation Plans

Professional site plan drawings ideal for evacuation plans, clearly showing fire safety equipment locations, escape routes, assembly points, and fire safety installations throughout your premises.

Who We Are

About NW Fire Solutions

Based at Egerton House, Birkenhead, NW Fire Solutions is a specialist fire safety consultancy serving residential and commercial premises across the UK.

Our team of highly qualified assessors and surveyors hold fire safety diplomas at **Level 4 or above**, with extensive experience across all building types.

We are committed to keeping building users safe and ensuring our clients meet their legal obligations under the **Regulatory Reform (Fire Safety) Order 2005**.

We are well suited and fully prepared to work with large and complex property portfolios, providing a consistent, high-quality service at scale. Our commitment extends well beyond the delivery of reports — we offer ongoing support to our clients, including direct consultations with the fire service, general advice and guidance, bespoke fire safety consultancy, and practical assistance with any fire safety matters that may arise.

Our Services

A Complete Fire Safety Solution

NW Fire Solutions offers six core fire safety services to protect your premises, your people, and your legal compliance — including professional site plan drawings for evacuation plans and fire safety installations.

Fire Risk Assessments

Legally required inspections identifying hazards and risk levels for all building types.

Fire Door Surveys

Comprehensive inspection and tagging of all fire doors to ensure compliance and safety.

Compartmentation Surveys

Assessment of fire compartmentation provisions and identification of breaches.

Fire Strategies

Tailored fire strategy documents covering all aspects of a building's fire safety features.

Fire Safety Training

Onsite and online training courses to keep your staff safe and your business compliant.

Site Plan Drawings

Professional site plan drawings for evacuation plans, fire safety installations, & regulatory submissions.

Fire Risk Assessments

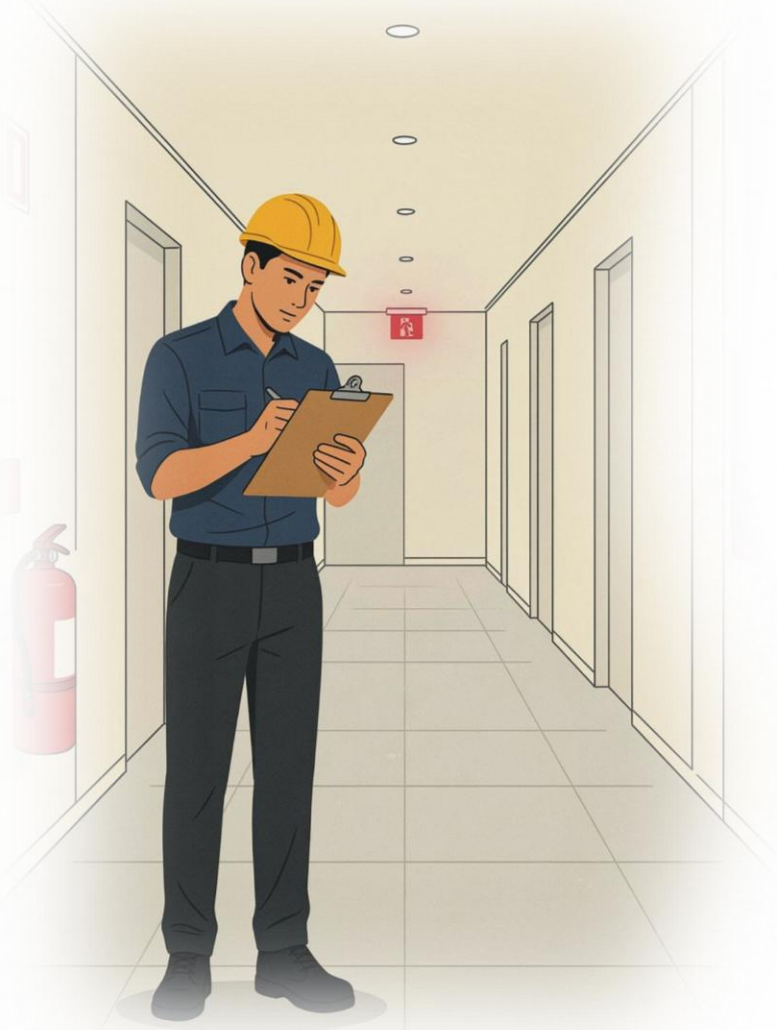

A Fire Risk Assessment is an organised inspection of your premises to identify fire hazards and estimate the level of risk. The aim is to inform the Responsible Person so they can remove or reduce hazards to an acceptable level.

Legal Requirement

Required under the **Regulatory Reform (Fire Safety) Order 2005** for workplaces and residential buildings with more than one dwelling.

Our Qualified Assessors

All assessors hold a **fire safety diploma at Level 4 or above** with extensive experience across all building types — ensuring every hazard is identified and properly assessed.

Fire Door Inspections

Fire doors are an integral part of any building's **passive fire protection system**, preventing the spread of fire and enabling safe evacuation. A damaged or poorly maintained fire door cannot be relied upon to perform as intended.

NW Fire Solutions provides comprehensive fire door surveys covering all doors on your premises. Each door is **tagged with a QR code and unique ID** for easy identification, and the report includes photographs as supporting evidence.

Compartmentation & Fire Stopping

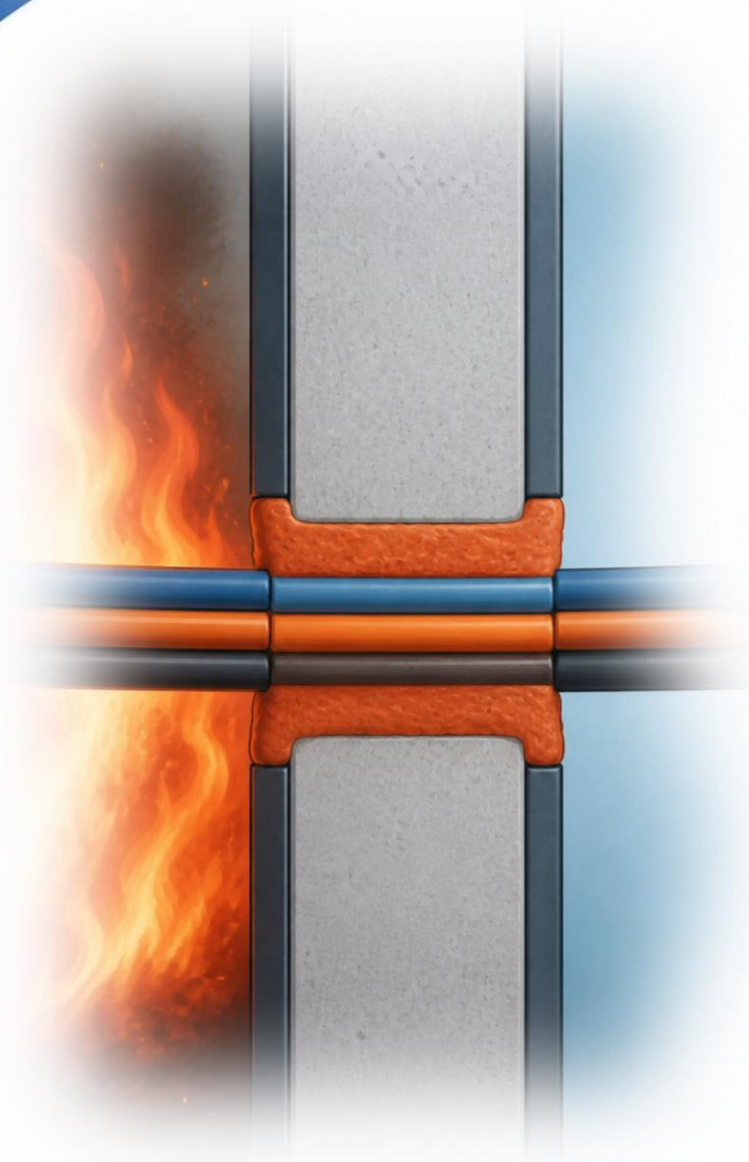

Compartmentation sub-divides buildings to prevent the rapid spread of smoke and fire — one of the most effective yet often overlooked methods of protecting a building and its occupants.

Compartmentation Survey

Assesses existing fire compartmentation provisions, structural condition, and produces detailed floor plan mark-ups showing compartment walls and floors.

Fire Stopping Survey

Identifies areas where fire-resisting walls have been breached, enabling correct remedial works to restrict the spread of fire and smoke.

Regulatory Compliance

Fire Strategies

A fire strategy is a complex document specifically tailored to a building, reviewing all aspects of its fire safety features — including construction, compartmentation, means of escape, and other measures to ensure it is fit for purpose.

Under **Regulation 38 of the Building Regulations**, any building being erected, extended, or undergoing a material change of use requires a package of fire safety information to be assembled and given to the Responsible Person. A fire strategy is the standard means of providing this.

Where this information is unavailable, NW Fire Solutions can commission a **retrospective strategy** to analyse potential fire spread and implement a plan to minimise destruction.

Site Plan Drawings & Evacuation Plans

NW Fire Solutions specializes in creating clear, accurate site plan drawings that are essential for effective emergency planning and compliance within your premises.

1

Evacuation Diagrams

Custom floor plans clearly illustrating primary and secondary escape routes, exits, and assembly points.

2

Equipment Locations

Precise mapping of fire extinguishers, fire alarm call points, hose reels, and other vital safety installations.

3

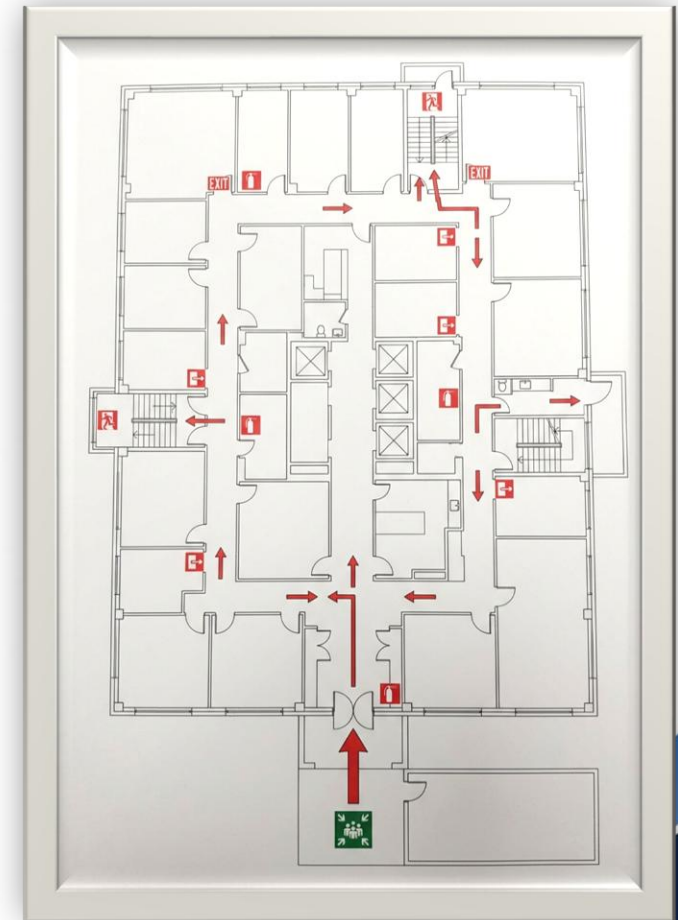

Emergency Planning

Provide crucial visual aids for staff training, fire wardens, and emergency services during a crisis.

4

Compliance & Signage

Ensure all fire safety signage and legal requirements are clearly communicated and easily understood.

Fire Safety Training

Fire safety training protects your business and is a **legal requirement** under the Regulatory Reform (Fire Safety) Order 2005. NW Fire Solutions provides onsite and online courses to keep staff safe and employers compliant.

Basic Fire Awareness

Foundation training for all staff at induction.

Fire Extinguisher Training

Practical skills to tackle small fires before they escalate.

Fire Marshal Training

Equips designated marshals to manage evacuations effectively.

Marshal Refresher

Online refresher course to maintain competency.

Online Training Platform

All online fire safety courses and more are available at www.nwfstraining.co.uk

Get Certified. Learn On Your Terms.

With over **2,500 courses** and a proven track record of learner success, our platform helps professionals at every level advance their skills and careers.
