

Structural Steelwork

Fabrication, erection and calculations, from one trusted team

From a single steel beam for a home extension to complete structural frames, we fabricate and install structural steelwork that is **UKCA marked to BS EN 1090 EXC2**. With **20 years' experience**, we handle the whole job, from design and calculations through to fabrication and erection on site.

What we do

- Steel beams, RSJs, columns and portal frames
- Steel frames for extensions, loft conversions and knock-throughs
- Mezzanine floors, platforms and support steelwork
- Commercial, agricultural and industrial structures
- Red oxide primed or raw steel to suit your project

How we help

- Structural calculations arranged through our engineering partners
- Fabrication in our Norwich workshop
- Delivery and erection by our own installation team
- RWC (Responsible Welding Coordinator) services for fabricators and contractors
- Clear communication with builders, architects and engineers

Design to install, done properly

We know structural steel can hold up the rest of a build, so we keep things simple. Send us your plans or engineer's drawings and we will price the job, arrange calculations where needed, fabricate the steel to specification and install it on site.

All our structural work is produced under our BS EN 1090 EXC2 factory production control, so you get documented, traceable, UKCA marked steelwork that satisfies building control.

We also provide **RWC services** to other fabricators and contractors who need a qualified Responsible Welding Coordinator to support their own compliance.

Why choose us

- 20 years' welding and fabrication experience
- UKCA marked to BS EN 1090 EXC2
- Full design-to-install service, one point of contact
- In-house workshop at Rackheath, Norwich
- Covering East Anglia, London and nationwide
- Free, no-obligation quotes
