Innovation in Miniature

PRODUCT DATA SHEET

375 ZERO LEAK CHEK[®]

The Lee Company's new 375 Zero Leak Chek Valve is the latest addition to our field proven, miniature zero leak check valve family. Weighing only 11 grams, the .375 inch diameter zero leak check valve is capable of flowing 1.9 GPM at 25 psid. The seat in this check valve incorporates an elastomeric seal to achieve zero leakage. The metal components are constructed entirely of stainless steel for durability and long life.

Available in forward and reverse flow configurations, this new check valve is ideal for high pressure applications with system pressures up to 5000 PSI. Each Zero Leak Chek Valve is 100% tested and inspected to ensure reliable, consistent performance.

FORWARD FLOW DIRECTION

\rightarrow	Ιζ

REVERSE FLOW DIRECTION

MATERIALS				
PART	MATERIAL	SPECIFICATION		
Body	15-5PH CRES	AMS 5659		
Poppet	15-5PH CRES	AMS 5659		
Seat	15-5PH CRES	AMS 5659		
Spring	17-7PH CRES	AMS 5678		
Pin	17-4PH CRES	AMS 5643		
Elastomeric Seat Each Valve Contains one of the following elastomeric materials.	Fluorocarbon	AMS-R-83485 or AMS-R-83248		
	EPDM	MIL-R-83285		

- Zero Leakage from 5 to 5000 psid
- 45 Lohms max. full open restriction
- Weighs only 11 grams
- All metal components made from Stainless Steel
- 100% Tested and Inspected
- Endurance Tested to 1,000,000 cycles

INSTALLATION HOLE

LEE PART NUMBER	CRACKING PRESSURE (psid)	LOHM RATE (maximum)	SEAT MATERIAL	FLOW DIRECTION
CSFA3756008A	8 maximum	45	Fluorocarbon	Forward
CSRA3756008A	8 maximum	45	Fluorocarbon	Reverse
CSFA3756108A	8 maximum	45	EPDM	Forward
CSRA3756108A	8 maximum	45	EPDM	Reverse

Finish: All Cres Parts Passivated per AMS 2700. Pins are prewaxed. Do not degrease. Do not lubricate.

at 85°F.

LEE LOHM LAWS

LOHMS LAWS (liquids)

Every engineer will be interested in our simple system of defining the fluid resistance of Lee hydraulic components.

Just as the OHM is used in the electrical industry, we find that we can use a liquid OHM or "Lohm" to good advantage on all hydraulic computations.

When using the Lohm system, you can forget about coefficients of discharge and dimensional tolerances on drilled holes. These factors are automatically compensated for in the Lohm calculations, and confirmed by testing each component to establish flow tolerances. The resistance to flow of any fluid control component can be expressed in Lohms.

The Lohm has been selected so that a 1 Lohm restriction will permit a flow of 100 gallons per minute of water with a pressure drop of 25 psi at a temperature of 80°F.

LIQUID FLOW FORMULA

The following formulas are presented to extend the use of the Lohm laws to many different liquids, operating over a wide range of pressure conditions.

These formulas introduce compensation factors for liquid density and viscosity. They are applicable to any liquid of known properties, with minimum restrictions on pressure levels or temperature.

The units constant (K) eliminates the need to convert pressure and flow parameters to special units.

Volumetric	KV ,∫	Н	Gravimetric	KV	цς
Flow Units	I	S	Flow Units	w	110

FREE LOHM SYSTEM SLIDE RULE

The Lee Company offers a specially designed Hydraulic and Pneumatic Flow Calculator to help in the transition to the Lohm System. This handy, free slide rule can be used to solve basic Lohm calculations.

LIQUID FLOW - UNITS CONSTANT K

VOLUMETRIC FLOW UNITS				
Elow Unito	Pressure Units			
	psi	bar	kPa	
GPM	20	76.2	7.62	
L/min	75.7	288	28.8	
ml/min	75700	288000	28800	
in³/min	4 620	17600	1 760	

GRAVIMETRIC FLOW UNITS				
Flow Units	Pressure Units			
	psi	bar	kPa	
PPH	10 000	38 100	3810	
gm/min	75700	288 000	28800	

NOMENCLATURE

- L = Lohms
- S = Specific gravity*
- H = Differential pressure
- V = Viscosity compensation factor**
- I = Liquid flow rate: Volumetric
- w = Liquid flow rate: Gravimetric
- K = Units Constant Liquid (see chart above)
- *S = 1.0 for water at 80°F.
- **V = 1.0 for water at 80°F.
