

Unleash your imagination

MicroSlat are innovators, not imitators.

We work closely with our clients to produce stunning display solutions that deliver powerful results.

The 25mm pitch maximises product density, display options and overall aesthetics, generating increased sales.

We design and manufacture the world's leading fine-pitched aluminium slatwall systems.

There are thousands of permutations to suit any situation; single-sided, double-sided or flat-backed profiles.

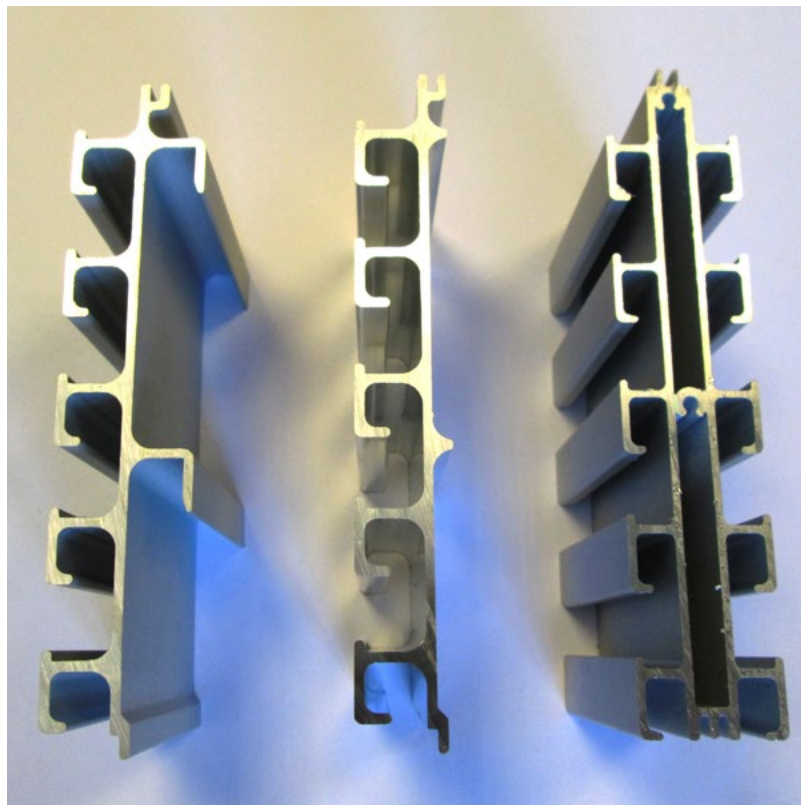

Choose from original, faceted, convex, concave or sloped designs and combine with any colour imaginable.

Our products are used by prestigious global retail giants. They choose MicroSlat because it is the best in the world.

MicroSlat is compatible with all standard slatwall accessories, thus saving additional expenditure.

The inherent strength and lightness of aluminium enables heavy products to be displayed as well as making the system quick and easy to install and relocate.

Retail display concepts - single-sided

MicroSlat is a strong, versatile, 25mm fine-pitched aluminium slatwall system that accommodates all standard slatwall accessories.

Together with an extensive range of standard and custom-made components it can be used to build unique and interesting displays or add value to existing designs/concepts in the retail, library, office and exhibition environment.

The 125mm high tongue and groove profiles interlock and hook on to the invisible supporting uprights. The system can be built up to any height and length required.

- 25 mm pitch
- single & double-sided
- high density & weight carrying capacity
- stronger than traditional slatwall
- compatible with standard slatwall accessories
- quick & easy to install/move/reassemble
- no visible supports
- wide range of colours anodised or powder coated
- modern & hi-tech
- fire & water resistant
- recyclable

Retail display concepts - double-sided

A double-sided version of MicroSlat is also available and can be used to create a wide variety of slim-line 'POP' display gondolas.

Double-sided MicroSlat slides and locks into our uniquely designed 8-way connecting post and is finished with a neat aluminium trim that connects in the same way.

Posts can be used individually to create 3 & 4-way 'POS' units. Two or more posts will create unique and/or unconventional gondolas as well as more traditional style units.

Optional coloured acrylic infills are available to slide into the 8-way post cavities which can also accommodate graphics or be illuminated.

MicroSpan

MicroSlat can be used to build a series of supporting columns at various heights and depths to create MicroSpan.

Used in conjunction with a wide range of slatwall components many creative applications are possible.

MicroPost

MicroPost is a free-standing MicroSlat column system that can be used individually or linked together by using garment rails or shelves.

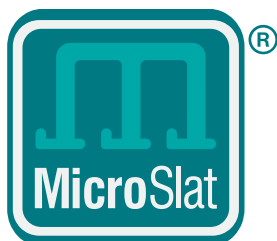

By using 'dog-legged' shelves you can create interesting and exciting feature display areas. They can be laid out in such a way to help direct footfall around your floor areas.

SlimPost

SlimPost is a cost effective yet hi-tech wall upright system. It is ideal for all manner of display requirements at a fraction of the cost of more elaborate solutions.

Installation costs are minimal due to its ease of fitting. No need to settle for plain slotted steel uprights when SlimPost will enhance your environment and help increase sales.
