

Installation C4000i

Installer: Horsham Electric Gates

Product overview: C4000i Integrated Residential Sliding gate operator

HORSHAM
ELECTRIC GATES

Residential Gate Automation

*Quote from
Chris Manvell,
Managing
Partner*

*"It made for a
tidy and safer
installation
with incredible
limit stop
accuracy. It
could be the
future!"*

BACKGROUND

A residential client was looking for a brand new drive and entrance way. Horsham Electric Gates designed a brand new gate entrance utilising the latest in automation technology, an integrated sliding gate operator.

This meant that the aesthetics of the site were maintained to a really high standard whilst giving the customer a smooth, silent, stunning gate system. With groundworks completed by a third party it made for straight forward, tidy installation.

The C4000i operator is easy to install due to the 4 adjustable fixing points and the rack and pinion meshing adjustment system. With the integrated E4000i control board, the install was easy and set up of the control board functions was straight forward as it's easily comparable to the E124 control board.

Chris stated that he would recommend the operator as "its small, powerful and ideal for residential insatllations where aesthetics are paramount".

The owner of the property was very pleased with how tidy the installation was and how smoothly the gate opens and closes.
