

NEONATE & PREMATURE BABY WARMING

MedWarm systems for warming underweight neonate and premature babies . There are two controllers, one with battery for mobile use. There is a heated cot mattress and two types of heated blanket - one made especially for mothers to nurse and feed their baby whilst warming continues. This is often called 'kangaroo care'.

MedWarm Theatre System

MedWarm Heated Mattresses

THEATRE WARMING BLANKETS

MedWarm Theatre System consists of warming blankets and a control unit for precise regulation of heat delivery. This gives hypothermia prevention in the intra operative setting. Because more than 90% of body heat is lost through the skin surface blankets should cover as much of the skin as possible.

A theatre warming system consists of:

- a controller
- a body blanket
- an arm-shoulder blanket, and possibly
- a heated mattress
- Adult Versions • Paediatric Versions

Pre- and recovery warming is made effective by using a single heated blanket that provides constant and controlled warmth for as long as necessary.

Features of all models

Very Low running costs, no forced air, totally cleanable and noise-free plus proven capable of transferring double the warmth to your patients.

Also available:
Transport & emergency heated blanket systems.

These are a very cost-effective alternative to forced air systems. Savings figures available on request.

These are even more effective when used with pre-warming and transport warming systems.

Equipment for Theatres

Fluid & Blanket Warming Cabinets
Blood Bank Refrigerators
Peri Operative Warming Blankets
Theatre Table Warming Mattresses
Theatre & Recovery Warming Blankets
RippleHeat & RippleCool Mattresses
Formalin Specimen Storage Cabinets

FW75 holds 25 1-litre bottles

FLUID WARMING CABINETS

For use in theatre prep rooms, Day Surgery, A&E, intensive care, etc. Options include glazed viewing panels, wall fixing brackets, stands, alarms and bag storage baskets.

14 standard models with storage capacities from 9 to 180 1-litre bottles; 2 to 40 3-litre bags, etc. We can also manufacture sizes to your needs.

CONTRAST MEDIA & LOTION WARMING

For use in theatres, clinics and other areas where contrast media or lotions must be warmed 37C to increase usability & patient comfort. Example is for warming contrast media in CT radiology.

MW40/2S with optional glass door

BLANKET WARMING CABINETS

The standard BW range of blanket warming cabinets offer safe warming of blankets. These insulated cabinets have microprocessor control of temperature and an independent safety cutout. They are available in eight popular sizes with storage from 4 to 40+ blankets. These cabinets are used in A&E as well as theatre recovery where patients will benefit from being kept warm.

There is evidence of fewer incidences of infection if patients are warmed during surgery. Patients will often recover faster from anaesthetics, in greater comfort, require less antibiotics and can be discharged sooner if kept warm post-operatively.

“Keeping Patients Warm is Best Practice”

The three budget models offer storage of blankets only, in cabinets of simple design and with basic controls.

BWH120 holds 16 hospital blankets

BW355/WH

COMBINED FLUID & BLANKET WARMING

Ideal for theatres needing both facilities in one compact unit. One cabinet is for storing fluids and the other is for storing blankets. Each section has its own temperature and safety systems. Special baskets store the blankets so that the warm air can circulate easily. Bottles of fluid are stored on wire shelves to ensure fast warm-up times. Five standard combinations of fluid/blanket cabinets are available and we can also manufacture to your needs.

For smaller departments with more basic needs we offer single compartment cabinets that can hold bottles and blankets together (see blanket warming cabinet range).

Model FW210/BW150/CC Shown with optional viewing panels

BLOOD BANK REFRIGERATORS

Storage from 20 to over 800 bags. All models are BS4376 & MHRA compliant and Medical Device registered. They all have a chart recorder and fully comprehensive dual alarm with remote contacts. Most models are available with a choice of storage on shelves or pull out drawers. Larger models are available with a backup second refrigeration system.

FORMALIN DISPENSING & SAMPLE STORAGE

Safe handling of formalin is always of importance so these cabinets are ideally suited for use in theatre prep room or stores areas.

The dispenser is free standing and has a foot switch so that your hands are free to safely hold specimen containers. The formalin is pumped direct from containers into sample pots.

The storage cabinet can sit on a bench and is ideally suited for the safe storage of samples waiting to go to the lab.
