

Natural Ventilation Systems by D+H UK

Our natural ventilation systems use natural pressure differentials to circulate fresh air in order to create comfortable indoor spaces.

We strive to improve the environments in which we work, live and learn.

Creating comfortable temperatures and good air quality is a challenge, especially in contemporary buildings.

Limited air exchange, thermal loads increased by equipment and extensive glazing are all factors that need to be addressed.

Our natural ventilation solutions overcome these issues and make it possible to control the indoor environment with ease, putting climate control in the hands of building occupants.

NSHEV Operation

- + Room temperature and CO2 control
- + Weather station for external monitoring
- + Interface with Building Management System (BMS) and/or heating system
- + Actuators & Drives
- + Remote Control
- + Ventilation Switches
- + Interfacing with Smoke Ventilation Systems
