

 **HAND ARM VIBRATION**

We offer a comprehensive management service that includes on-site tool testing and evaluation, risk assessments, work practice optimisation and ongoing training and professional recommendations. A full vibration analysis is performed and a report presented stating the findings and our recommendations on:

- On-site Havs and noise audits
- Potential hazards
- Vibration and noise risks
- Safe trigger times
- Vibration and noise level minimisation

 **NOISE AUDITS**

Hearing damage caused by exposure to noise at work is entirely preventable if employers take the necessary measures to reduce exposure.

DPA Technologies Ltd complete a thorough assessment of the workplace. Our comprehensive report will outline any areas posing a threat and recommendations for rectifying these.

We also produce ancillary tool reports during our testing.

**KEEPING YOUR WORKPLACE SAFE SINCE 2008**

 **COSHH LEV TESTING**

A well-maintained LEV system will reduce exposure to airborne contaminants such as dust, mist, fumes, vapour or gas in the workplace.

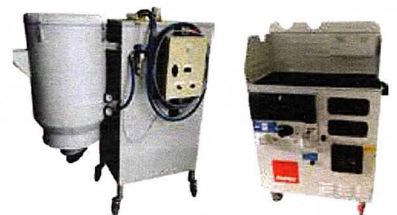

- Dust Extraction
- Paint Mixing Rooms
- Fume Extraction
- Exhaust Extraction

 **DUST EXTRACTION SOLUTIONS**

We have vast experience in installing and servicing dust extraction systems, keeping workers safe and ensuring compliance with Health & Safety regulations.

- Centralised dust extraction systems
- Mobile dust extractors
- Extraction hoses
- Air lines
