

Your 1st choice for Double-Gusset Stand-Up Pouches

NEW environmentally friendly **KALCAD Double Gussets Stand-Up Pouch** offers a laminate based stand-up pouch with a 'box shape' designed to replace the old 'bag-in-box' packaging concept.

This state of the art design and technological sophistication gives **KALCAD** products the competitive advantages of a market leader. The **KALCAD** stand up pouch stands alone and eliminates the needs for carton box or any other rigid elements.

KALCAD offers appealing marketing advantages including competitive pricing and on-shelf differentiation. **KALCAD** new pouches represent a "green" breakthrough packaging technology.

KALCAD Double Gussets Stand-Up Pouch (registered patent) is the ultimate packaging solution in the market. Capable of holding 300ml - 5L of liquids or pastes, and tolerating temperatures ranging from freezing (-40 °C) to boiling (100 °C). **KALCAD Double Gussets Stand-Up Pouch** has a variety of potential applications (beverages, wine, food, detergents, cosmetics and technical fluids). **KALCAD** product line is ready to hit the market right away!

Decisive competitive advantages:

Versatility: **KALCAD** Pouches are suited for a broad spectrum of possible applications. The pouches are available with customized foil laminates that guarantee optimal mechanical and barrier properties for the pouches. **KALCAD** Pouches can be fitted with variety types, sizes and colors of closures and taps.

Robustness: Due to its patented stabilization ribs and other specific design features (handles, bottom rim, etc) even the largest **KALCAD** pouches offer robustness and handling properties, which are comparable to other rigid containers. The inherent stability of **KALCAD** Pouches allows comfortable handling of full as well as of partially emptied pouches, making them suitable as primary packaging or as refill. A turn able (90°) spout facilitates the controlled pouring out of contents without any splashing.

The highest hygienic requirements: The **KALCAD** pouch allows for aseptic, sterile and hot filling processes. The **KALCAD** pouch is designed for hygienic filling in a flattened void pouch, avoiding any air contact with the filling medium and reducing the formation of foam, even at the highest filling speeds.

Temperature stability: The **KALCAD** pouch, contrary to Tetra Pak, glass and plastic packs, allows hot (100 °C) filling and heating processes of the content as well as shock freezing (-20 °C) processes without causing any harm to the texture of the laminate.
