

Fibre Termination Equipment

Field Use Equipment

- Compact and portable, these products are designed for efficient use in the field.

Seikoh Giken Polishing Machines

- The widest range of production polishers utilizing our proprietary turntable design
- With our exclusive rotation-revolution mechanism, polishing films and polishing processes, and with over two decades of connector polishing expertise all contribute to the highest quality optical performance

Seikoh Giken Polishing Consumables

- Polishing pads
- Polishing films
- Polishing fluid
- Cleaning brush for IPC
- MT polishing kits of consumables and substances

Seikoh Giken Polishing Consumables Buyers Guide

- Polishing pads
- Polishing films
- Polishing fluid
- Cleaning brush for IPC
- MT polishing kits of consumables and substances

Seikoh Giken SFP Family Polishing Holders

- Independent pressure control (IPC) holders
- Fibre array polishing holder
- Straight ferrule polishing holder

- SFP-500 family 'Mega Axis' high volume holders for increased productivity

[Seikoh Giken SFP- Family Polishing Holder Buyers Guide](#)

- Independent pressure control (IPC) holders
- Fibre array polishing holder
- Straight ferrule polishing holder
- SFP-500 family 'Mega Axis' high volume holders for increased productivity

[Adhesive Curing Ovens](#)

Efficient and easy to use ovens for curing the adhesive holding the optical fibre in the ferrule.

- Mass production adhesive curing oven
- Standard adhesive curing oven

[Fibre End Processing Tools](#)

Tools for:

- Preparing fibre for termination
- Fibre end processing
- Terminating

[OFL-15A Family Polishing Holders](#)

By adopting a coil spring mechanism, this holder enables the user to install ferrules instantly increasing throughput and reliability compared with the older screw fixing type. OFL series holders are also available for special design ferrules and connectors.
