Create a positive image from the Start

A professional display reinvents uninspiring reception areas, whilst enhancing communication and collaboration between employees, clients and visitors. It also creates a wow factor and talking point.

The foyer and reception areas of an organisation are vital for making positive first impressions on visitors. When they enter your building, it may be the first experience they've had of you outside of the digital space. A smart, yet relaxed area with diversions such as a video wall or digital signage screens, helps to put people at ease and gives you the chance to showcase Key messages, deliver news and help visitors form a good opinion.

Professional panels can cater for any space or lighting conditions, even full daylight in HD or 4K. Multiple information streams can be displayed simultaneously on different panels or cover the entire screen space with a single image. They can run 24/7, enjoy low running costs and enable you to change images, text or video instantly, or even schedule changes through a signage player.

Walk up and use collaboration

Modern workspaces provide the workforce with the flexibility to choose the right space for the task or type of work. Work is no longer a place we go to but a thing we do.

Many companies are introducing open-space collaborative working areas into the workplace to encourage greater interactivity between employees. This increases creativity, motivates staff, improves productivity as well as reducing costs. In many companies, people are encouraged to spend more time collaborating with others than at their own desks.

Wireless technology and cloud storage make it easier for companies to embrace open-areas and nomadic workspaces. Workers no longer need their own dedicated desk – the nature of work is changing.

Clevertouch Pro is designed for collaborative working environments. It's 'walk-up-and-use' functionality lends itself perfectly to ad-hoc group discussions and visitor use in communal areas, whilst at the same time keeping them off-network through the power of the built-in LUX platform.

Remarkably easy-to-use, the Clevertouch Pro provides full access to the most popular files and functions such as office documents, PDFs and video. Users can even insert a memory stick without the need for a PC or risk to the IT infrastructure.

Enhancing C-Suite with usable technology

Touch technology, social media, big data and cloud computing are not only changing the way we work, but also changing the way in which today's business leaders manage their companies.

The C-Suite used to consider IT a cost centre with little strategic value such as help desks, telecoms, hardware and onsite servers. Nowadays IT is central to a company's strategic growth, even its very existence. As such it has been pushed very much centre stage and is now one of the most important components of an organisation. Businesses need senior executives that not only understand the intrinsic value of technology but also know how to innovate and guide their business to take advantage of fast-paced developments.

Clevertouch delivers the very latest in interactive stand-alone touch screens with built in business applications designed to aid senior executives with strategic planning and decision making. To be able to communicate this key information to the business as quickly and effectively as possible, they need to utilise the best technology available – not waste time converting hand written notes and flipchart content into a document that is often sent out days later.

Modern meeting rooms have been transformed using audio visual technology – no longer is a flip chart or minute taking necessary for today's executives.

The prevalence of mobile technology in our personal lives is forcing businesses to be more forward thinking around the facilities they provide their employees. Meeting rooms are a critical area – a space for communicating, creating, brainstorming, training and decision making. Laptops, smartphones and tablets are crucial to that process, so it's only logical that your meeting room equipment is advanced enough to be able to integrate with them.

The Clevertouch Pro is a highly versatile large-format 4k UHD display designed for collaborative meetings. A powerful interactive touchscreen, it is easy to use, requires no set-up or calibration, can connect to your laptop at the touch of a button and screen-share wirelessly across multiple devices.

The Clevertouch Pro, enables anyone to connect easily via a browser, AirPlay, or the desktop application. It can access any file type or web site, and annotate over it using the built-in ink facilities. By combining this with an unbound white boarding space, meeting participants can save and distribute a complete record of the discussion, directly from the screen.

With top organisations embracing trends such as collaboration, mobile working, flexible hours and BYOD, it is becoming more important than ever to ensure that technology within a business actually enables productivity and efficiency, as oppose to hampering it.

To attract and keep the best talent, businesses have to offer workspaces that provide staff with what they need to suit the way they work.

Increase Productivity in Meeting Rooms

Informed decisions in the Boardroom

Clevertouch Pro comes with a range of features and apps designed to help executives collaborate, to develop deep thinking and future strategies.

Executives with their fingers-on-the-pulse know that collaboration between employees at all levels is a source of competitive advantage for businesses. It is therefore essential that they are using the technologies that will help them to stay connected to the people within their business and effectively communicate with external stakeholders.

With this in mind, Clevertouch Pro comes with a range of business features that integrate with business software solutions designed to help C-suite executives collaborate, make decisions and communicate them to the business quickly and efficiently. Gone are the days of tables full of cables and on-call IT support.

The Clevertouch Pro is a powerful cross-platform solution which views all devices agnostically, avoiding time consuming compatibility issues with third-party devices – simply plug-in and go. External visitors can easily be invited to join the discussion without the need to download drivers or software.

The screen seamlessly integrates with the existing IT and communication solution of choice and features multiple inputs for additional PC/laptops and VC equipment. Companies can go one step further by adding collaborative presentation solutions such as Montage or WePresent that allow remote participants to join with voice, video, PC control and even ink into documents remotely.

Moving forward with visual technology

Responsive technologies that adapt with your environments to keep your office agile and connected

Let the big ideas flow with the Smart marker.

Simply attach to any surface, including glass, and write with a dry erase pen in the marker sleeve and record every idea digitally. Connect any device on any platform with Bluetooth to save your ideas as PDFs or share them with up to 250 people real-time, anywhere in the world. Live streaming allows you to invite others to add to your ideas with ink, text and photos. Once you've finished, use the OCR to produce type-written notes in an instant and then store for your next meeting or offer as a resource for others to use.

Captivate and inform with digital signage.

Digital displays give informational and directional signage in the workplace a smarter, brighter and more modern appearance. The professional high definition screens can communicate anything you want from an instructional video, scrolling messages, RSS feed or even your Tweets. Images can be distributed across one or multiple screens and the content changed at the click of a button or scheduled in advance. It instantly alleviates the problem of spending time and money replacing tired or out-of-date posters.

We live in a digital age and are bombarded with visual imagery and messages. As a result, our attention spans have shortened meaning today's signage needs to bolder and more dynamic than ever before to cut through the malaise and grab our attention.

The largest of spaces can still provide a personal experience where you feel informed and involved.

Gone are the days of poor quality images from hot noisy projectors, or displays that are simply too small.

The demands of the projector market are increasing and SSL (Solid State Light Source) projectors are leading the way. Brighter, higher contrast, higher resolution, larger images, less energy consumption, lower maintenance and environmentally friendly materials, irrespective of whether it's a monitor or a projector, these days the market expects more. Clevertouch provide a range of laser projectors for every application with no lamp and no fuss that provide the answer.

Projection screens of any size can be permanently fixed or hidden away in the ceiling, accessible at the click of a button, providing the surface required for high definition projection that bring images and video to life. This flexibility allows you to separate the rooms again or use the space for another function.

Connect the projector to a Clevertouch Pro and watch the presenter bring things to life and with the option to wirelessly connect. The audience can hold the presentation in their hands on devices and even add ink or comment when asked to. Space is not a barrier to interactivity or creativity and people are individual not a crowd.
