contents

Freedom Ability has established itself as a major provider of seating, desking, storage and specialist furniture to meet the “transformational working agenda”. In order to facilitate this many of the products are mobile, flexible and can be used for multiple activities.

The directors of Freedom Ability have over 40 years experience within the educational furniture marketplace but are also intimately involved in meeting the aspirations of the modern teaching environment through the consultancy service they offer within Halo Education Ltd which has worked on many 'Building Schools for the Future' and Academy programmes.

Freedom Ability supplies many of the leading schools in the UK including Thomas Telford School, Lord Mayor Treloar College, The National Star Centre, Walworth Academy, Lancashire BSF, Birmingham BSF, Tameside BSF and is also a supplier to Carillion Construction, Balfour Beatty Construction and Bovis Lend Lease Ltd.

Freedom Ability is a UK manufacturer supporting British jobs and local industry nationwide. The company practices lean manufacturing principles to offer our customers value for money and rapid delivery. The items within this catalogue have all been developed after listening to customers' needs therefore if you have a special requirement please do not hesitate to contact us.

Rapid adjustment. Minimum to maximum height in just 15 seconds with 580mm of adjustment.

Grey top:	FLSSRT-1200-LM-01

height adjustable//

fastlift range

round central column

The FASTLIFT range of tables adjusts from standing height to sitting height in seconds. This enables the user to be stood in a standing frame or sitting in a chair and also accommodates wheelchair access.

In order to achieve the fastest adjustment speeds available the adjustment is by way of a double acting fast helix screw, which takes just 15 seconds to travel from top to bottom and allows a precise adjustment.

For multi purpose areas the tilting top allows the units to be nested into one another, allowing you to open up a room for role play and other activities and the frame features four wheels allowing mobility within any room.

fastlift range

twin column

Rapid adjustment.
Minimum to maximum height in just 15 seconds with 580mm of adjustment.

Twin column allows unrestricted access.

This Vari-X range has the largest range of movement of any height adjustable table on the market. It is the only unit that can be used when lying on the floor, sitting or standing. It may be fitted with a variety of tops and surface accessories, making this system one of the most versatile available.

The Vari-X suite features a wide range of tables with many optional extras. Built to take an evenly distributed load of 40 kg, they are designed to be both extremely versatile and very durable.

This robust design has a simple mechanism designed for all to use. To adjust, simply wind the handle until the required height is achieved. The mechanism is self locking and the handle may be removed to make the unit tamper proof.

Vari-X tables are finished as standard with silver and chrome frames with a maple melamine MDF work surface (and will be supplied as such if no alternative finish code is specified).

Vari-X laboratory tables are finished as standard in silver and chrome frames with a plain grey Trespa Athlon surface (and will be supplied as such if no alternative finish code is specified).

Alternative bespoke frame and worktop finishes are available. Please enquire for further information.

Other work surface materials may be specified e.g Corian or Solid Timber with prices available on request.

vari-x range

science, design and vari-x options

Vari-X laboratory tables are fitted with Trespa Athlon work tops which are impervious to chemical attack. An anti-spillage recess is machined into the work surface to aid user protection.

The worktop of the Vari-X table, with two thirds tilting top, is adjusted via a ratchet mechanism.

vari-x range

manual computer workstations

Mobile I.T. Units

Utilising the successful Vari-X frame the mobile IT units are a popular choice. Available in three standard models with an optional tower hanger (however this does restrict the lower height adjustment), these mobile workstations are fitted as standard with castors; two of the four being fitted with brakes.

Finished with silver frames and three standard worktop finishes; Maple, Beech & Grey (see colour options on the back cover of this brochure).

Powered Height Adjustable Mobile IT Units

Built to the same robust standards as the manual model, the electrically powered units have an adjustment range of 780mm to 1130mm, and may be fitted with the same variety of tops and accessories.

To adjust simply press the button until the required height is achieved. However if the unit is to be used by people who require supervision we recommend that the handset is removed as an additional safety measure once the required height is achieved. Electrical units come complete with a cable remote switch.

Vari-H I.T. Units may be fitted with an optional hanging tower bracket, fitted to the left side for stability.

Bespoke Table Football & Table Hockey models are also available. Please contact our sales team for more information.

homecare

group tables

The HOMECARE range of tables are designed to blend in with contemporary furniture design, creating a comfortable environment for users whilst still offering 300mm of height adjustment.

Homecare range

The Homecare leg system can be configured to work with most top sizes and shapes likely to be required, however if castors are required a sub frame may be necessary. All Homecare units have a height adjustment range of 300mm, which is normally sufficient to enable the table to be used by a seated child or a standing adult. All Homecare tables are finished as standard with silver frames and maple tops. Two alternate work tops are available in beech or grey.

craft benches & bespoke solutions

We are market leaders of variable height furniture for science & the technologies. In addition to the various units and tables depicted in this brochure we can also design and build bespoke units to your specifications.

Our technical design department can meet most special requirements, such as The Meadows school pictured above. Laboratories, kitchens and other specialist teaching rooms received powered height adjustable units designed, built and installed specifically for the school.

The Flipo range features a folding top which enables the unit to be stored quickly, safely and efficiently by nesting them together, as opposed to a conventional stacking system, improving health and safety. The folding mechanism is operated by pulling on the release bar.

Four wheels are fitted to provide maximum manoeuvrability. The wheels are steel housed for extra durability and two feature foot operated brakes.

The frame is epoxy powder coated for durability and the worktop is 27mm thick plastic laminated MDF.

A Trespa worktop is also available at an additional cost, please call us for details.

Improve life cycle

The standard leg is used in the Crescent and 600 mm deep Rectangular and Square tables. By standardising legs, components can be re-used to improve life cycle performance.

Size Marks

The V38 tables are available in all size marks, from 0-7 (see table on back cover). Please call us to specify which size mark you require.

V Table Range

The V Table range has been specifically designed to enhance flexibility, durability, style & life cycle. Constructed from 38mm diameter heavy duty steel tubing the common leg frame can be interchanged between various tops to meet varying needs. The work surface is constructed from a 27mm thick high-pressure laminate balanced MDF with three coats of lacquer applied to the MDF edge. When fitted with the optional wheels the units are easy to manoeuvre on a wheelbarrow principle as shown above.

v-50 table

heavy duty tables for classroom, art, projects, science, & technology.

Seating and Standing Heights Available

These tables are constructed from fully welded heavy duty 50mm round steel tube making them exceptionally strong. The adjustable feet compensate for uneven floors.

Perfect for use in classrooms where durability is the key priority or practical work areas where the strong legs can maintain standing height stability coupled with allowing unrestricted access to all sides. The V-50 range has become a favourite of the academy programme and are regularly specified by the major academy groups.

They are available in a variety of sizes, finishes and shapes, including square, rectangular, trapezoidal and round with a 27mm laminate MDF or 13mm Trespa top.

v-25 stacking table

economy teachers & student tables

Economy Tables

The stacking tables uses a rotational stacking system meaning there are no protruding legs outside of the footprint of the worktop. This makes them ideal for group work when a large work surface is required.

All tables use 25mm square tubing frames with 27mm thick high-pressure laminate MDF worktop and all edges are lacquered and profiled.

These tables are available in 600mm square and 1200mm x 600mm rectangular in all size marks (see table on back cover). The optional modesty panel allows these tables to be used as an economical teacher's workstation when used with a mobile drawer pedestal.

tiered ict

clear view of user activity

We offer a consultancy and design service for all large-scale specialist teaching areas, along with an itemised quote. Please call us to discuss your requirements.

Tiered ICT benching with a teacher-facing writing plinth allows discreet monitoring of all students' IT activities with the added flexibility, when the student rotates through 180°, of an independent writing surface. The tiered layout also promotes good sightlines between the teacher and student. A section of the front row writing plinth and tiered benching is height adjustable for DDA compliance. This solution was developed for United Learning Trust and the academies that they operate.

Frame: Silver

Worktop:

Maple: ICTC6-2021-72-03

Beech: ICTC6-2021-72-02

Grey: ICTC6-2021-72-01

ICT Clusters are available also for four, six and eight people. They all feature vertical integral cable segregation.

daisy chain ict desks

linkable tables including power modules & leads

The modesty panel is reversible so the cable management and power units can be on the inside under the table top. Orders less than £950.00 will be delivered flat packed.

These single or two person computer desks feature a rear panel with access to power modules and three compartment cable segregation. This allows a number of desks to offer power charging from one 13 amp power socket. Codes and prices include 1 no. mains lead 1.5m long fitted with a 13amp plug top and 1 no. interconnecting lead 1.5m long enabling daisy chaining of the desks.

seating//

eduflex seating

suited system

Eduflex is specifically designed for the education marketplace. The gas injection moulding process of the chair shell maintains stability and aesthetics. Eduflex is available in three designs; four leg is the most economical, reverse cantilever design is height adjustable and will swivel through 360°.

The reverse cantilever design improves health and safety as, when stored on a table, the chair is less likely to fall off the table top and cause injury. This safe storage solution also aids classroom cleaning.

EFC-4243-43 -10 -EF-SP
(Chair code) (Colour) (Seat pad)

sofi, eduflex stool & activo stool

chairs and stools

Sofi is a lightweight stackable chair with a single moulded polypropylene shell supported with four anodised aluminium legs.

Sofi is suitable for indoor or outdoor use, the seat pan surface incorporates a rain water drain hole. However it is not recommended for classroom use.

Activo and Eduflex stools are stackable and feature a single piece polypropylene moulded seat and back. The frame has been designed to help prevent users tipping backwards on the stool.

They are supported by a cantilever frame which will reduce the risk of damage to floor coverings.

The Activo stool, with it's low back design will allow in most cases for the stools to be stored underneath a standing height loose table whilst standing activities are taking place.

single & double sided benching

Durable, Robust and Practical

Tubular steel construction combined with hardwood slats provide a breathable and robust seating surface, complete with steel powder coated hooks, ensures these benches are fit for the demands of the changing room environment. To improve floor cleaning access the benches do not have shoe trays fitted.

make

craft benches & storage seats

These sturdy fully welded multi-material craft benches will accommodate four students, providing each with their own work area and 7 inch soft jaw woodworking vice. The 50mm thick work surface can be constructed from beech hardwood or MDF and incorporates a central tool well. Optional cupboards are available for storage underneath. The optional engineers vice with tray shown below allows a quick conversion from soft materials to metal. The box storage seat incorporates gas springs for improved safety.

Generic Primary School Classroom Wall Store

Wall Store

Wall storage provides a considered approach to the storage of materials, resources and students' work. When combined with mobile units the efficiency and organisation of the learning environment is improved.

We offer a consultancy and design service for all large-scale specialist teaching areas, along with an itemised quote.

Please call us to discuss your requirements.

reconfigurable work areas//

halo group

learning pods

The Halo Group is a completely reconfigurable system which allows total flexibility to create an array of different work areas. Halo Group consists of eight individual furniture items in three radii that can be arranged and re-arranged to create a multitude of social or individual activity areas and work stations.

The system features a 1200mm long x 900mm high screen (that can be double configured to create a 1800mm screen), a choice of 900mm or 1800mm end caps, four types of seating (internal or external, seat or bench) internal and external tables and an external library shelving unit.

The system is based on 1 metre, 1.5 metre and 2 metre radii that follow the centreline of the screen.

Available in a variety of laminate finishes and colours, the screens can also incorporate power and data modules. A member of our sales team will happily talk through any bespoke requirements.

Measurement Definition

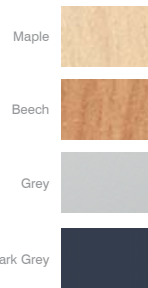

All Freedom Ability tables are ergonomically correct to EN1729 part 1. Please refer to the table above to specify the height of the table or chair that is required. In order to access the height of table or chair required, the childrens popliteal height defines the correct seat and table height. The measurement is taken from the floor to the back of the knee when seated, with thighs horizontal, the lower leg vertical and with feet flat on the floor. Sitting table height is determined by sitting elbow height, measured as the distance from the floor to the underside of the elbow whilst sitting, with the upper arm vertical and lower arm horizontal. Standing work height is determined by standing elbow height, which is the distance from the floor to the underside of the elbow of a standing person with the upper arm vertical and lower arm horizontal. To order the correct size mark please replace the height element of the product code with the height required. eg. V38P-8373-71-03G the digit "71" within this code refers to the product height from the Sitting Working Height row within the table above (all heights within the table above are in centimeters).

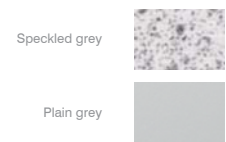

Standard Worktop Colour Chart

Please note if a colour finish is not specified at the time of ordering then the standard default finishes will be supplied. (Nb. Due to printing issues the colour finishes below may not always be a true representation so please use as guidance only)
