

WindowMaster electric window operation

WindowMaster - lends a helping hand

Control and operation

UniControl - control and operation of one window

UniControl type WUX100 is the optimum solution when you want to operate one window electrically. UniControl can be used with all WindowMaster window operators using the wall mounted keypad and as an option with a slim-line remote control.

The user friendly keypads can be set to open the window fully with a simple touch (automatic control) or by constant pressure on the button (manual control).

The infra-red remote control WLR100 is security coded. Only the correctly coded remote control unit can activate the windows.

CombiLink - control and operation of more window

CombiLink is a modular and flexible system. With the CombiLink components you can build up a system to suit your needs.

The control unit type WLC100 can operate up to 3 windows. If you want to operate more windows then the control units can be linked together.

The WLI110 keypad will control one motor individually or centrally control several motors simultaneously.

The keypad WLI130 provides the option of individual operation of up to 3 motors.

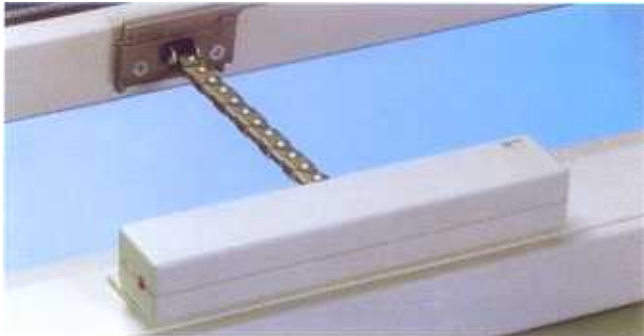

Both keypads can be set to open the window fully with a simple touch (automatic control) or by constant pressure on the button (manual control).

Window operator WMU100 - for outward opening windows

The window operator type WMU100 is a compact and elegant solution that fits on almost all outward opening windows: top or side hung, pivoting windows or roof windows in conservatories etc.

24V chain motor with stop button.
Variable opening up to 15 cm.
It is easy to disengage the chain for cleaning the window.

Window operator WMI100 - for inward opening windows

The slim-line design and the concealed wiring of the window operator allows for an unobtrusive installation on all inward opening, bottom or side hung windows.

24V chain motor with stop button.
Variable opening up to 15 cm.
Maximum opening can be set to suit weather conditions.
It is easy to disengage the chain for cleaning the window.

Freedom - Less able and elderly people sometimes have difficulty with day to day tasks like opening and closing windows.

The window operators are an invaluable aid for the less able who retain their independence by being able to control the room environment.

By installing a WindowMaster electric window opener it is now possible to obtain fresh air by a simple touch of a keypad or by remote control.

With WindowMaster no windows are out of reach.

Easy access - Fresh air in the house is of vital importance to a healthy indoor environment. With electric window operation it is easy to provide the necessary ventilation.

Windows can be positioned at high level, have furniture placed in front of them or be obstructed by Venetian blinds or pot plants. WindowMaster allows easy opening and closing.

Inaccessible windows can now be opened and can be conveniently operated from anywhere in the room.

WindowMaster opens up many new possibilities.
