# Disposable Gloves

## Setting the new standard in glove dispensing.

The latest innovation in glove dispensing reducing cross contamination and wastage. SafeDon gloves are dispensed individually by the cuff, reducing cross contamination associated with traditional glove boxes.

### Key Selling Points

- Pull tab opening prevents contamination of dispense area.
- Users need never touch the box once it is in wall dispenser.
- Users cannot touch other gloves in the box.
- Glove is always taken from the box by the cuff only.
- Gloves always dispense one at a time with zero wastage.
- It is impossible to put dirty gloves back into the box.
- Gloves vend easily and donning time is dramatically reduced.

## Sensi-Touch® Silk Glove Liners

Sensi-Touch® silk glove liners provide a positive barrier between the skin and the glove. This will help to reduce to a minimal level any leaching of glove components which may cause irritation to the skin. Silk liners will effectively absorb perspiration and wick it away, helping to keep the hands dry and fresh. The elimination of high levels of perspiration will reduce the super hydration effect on the skin cells which causes them to swell and disrupt.

Sensi-Touch® silk glove liners are manufactured from ultra fine knitted silk fabric, which stretches to conform closely to the skin, resulting in virtually no loss of touch. The absorption of perspiration by the material increases operator tactility and increases work performance.
