integreater
planning & management

available to sell

The Problem

Poor vision and planning can result in surplus and shortage of stock in both the raw material and finished goods warehouses.

Over stocking leads to wastage, forcing processors to freeze produce. This significantly lowers sales value and increases storage costs, both of which reduce already small profit margins.

Under stocking also increases costs, as processors cannot afford to negotiate the best prices when purchasing raw materials at the last minute. Operators may also fail to fulfil orders on time, which can be very damaging to customer relationships.

The Solution

Integrator® ensures that management have a real time view of what stock is available to sell, based on fulfilled orders and raw material availability.

The system uses simple colour-code technology to ensure 100% visibility of stock volume, location, age and value. It is also possible to analyse and segregate production using run numbers, enabling operators to isolate any problematic batches with ease. Management have far more control and disruption is contained, reducing any negative impact on the production cycle.

Electronic data management promotes informed decision making, planning and forecasting. This is supported by touchscreen technology, enabling processors to easily view information on live and future stock, as well as actual and unconfirmed orders to be satisfied.

The Result

Food processors have the vision and knowledge to achieve effective planning and stock management. Operators can instantly view what raw materials are on site and the sales team always have an accurate view of stock availability. Businesses are therefore able to optimise order fulfilment and be best prepared to cope with last minute order changes.

recalibrate your
profitability |

Major Benefits

- greater control
- informed decision making
- greater foresight
- optimum use of raw materials
- improved short/long term planning
- less stock holding/freezing
- improved service level performance
- greater control
- complete traceability
- improved customer relationships
- greater understanding
- complete visibility
- reduced over/under stocking
- effective order fulfilment
- improved accuracy
- greater profitability

Product Features

- electronic data management
- automated analysis and calculations
- multiple run number capability
- automated reporting and distribution
- simple colour-code technology
- flexible forward planning function

What is Integrator®?

Integrator® is an **enterprise manufacturing execution system**, also known as an **e-MES**. The unique solution works by ensuring that management have the visibility to achieve greater accuracy, efficiency and traceability. It effectively holds a magnifying glass up to your processing cycle, so that you can see exactly what's going on and identify where you need to make improvements.

How is it different?

Integrator® has been developed by professionals from the food processing industry and offers more functionality than a standard Manufacturing Execution System (MES).

Enterprise Resource Planning (ERP) software is too generic for food production and often requires users to adhere with a set of standard practices. To solve this problem, **Integrator®** has been developed to account for all the variants and complexities that are specific to the food processing industry. It integrates with your business model to ensure that you can improve performance, without jeopardising your unique selling points.
