

Case Study - Four screed teams install a sports hall of 630m² of FlexiDry fast drying floor screed in one day

Frenford sports club's new facility in Redbridge, Essex delivered the construction team with a sporting challenge of a different kind recently. Main contractor Mansell asked that the entire 630 sq m sports hall floor be installed in a single day.

While the benefit would be an uninterrupted flat surface onto which the sports hall floor would be laid, warmed by a Warmafloor GB underfloor heating system, one of FlexiDry's approved contractors had to arrange for four screed teams to start work on site early to complete the task; they are pictured working through the morning shift!

When finished in late 2010, the £5.3 million project will provide a sports pavilion and associated sports facilities for the London Borough of Redbridge, with dance studio, fitness suite, music centre, IT suite, large sports hall and all weather pitches for outdoor games.
