

SamTag[®]

FLEXIBLE – STRONG – RELIABLE – EFFICIENT

For Demanding Environments

SamTag®

FLEXIBLE – STRONG – RELIABLE – EFFICIENT

SAM-Tag® stands for Self Adhesive Metal tag and has been specially developed for demanding environments. In the steel industry the SAM-Tag® is very suitable for the labelling of metallic surfaces.

The SAM-Tag® is also suitable under other adverse conditions, such as on rough, smooth, wet and even on greasy surfaces. Even under such conditions the SAM-Tag® adheres permanently. It consists of high-class, tear proof polyester, which can be imprinted by a standard laser printer.

FLEXIBLE

SAM-Tag® is available in different versions. It can be used as a tag label as well as a self adhesive label. SAM-Tag® is the labelling solution for a variety of applications!

STRONG

SAM-Tag® has been developed specially for the steel industry. It is extremely temperature-resistant and due to its very strong adhesive layer it adheres to many different surfaces. There is even a version which can be applied at temperatures down to -20°C. This is ideal for products which are stored outside.

RELIABLE

SAM-Tag® can be printed on most laser printers without any problem. The adhesive-free edges prevent adhesive residue building up in your printer.

EFFICIENT

SAM-Tag® can be applied under a wide range of conditions and has financial benefits as well. Due to the fact that it can be printed on standard laser printers, there is no need to purchase expensive printing equipment.

SAM-Tag® is available in the following versions:

- SAM-Tag® „Strong“** Dimensions 105x148 mm, with an extra strong adhesive layer. This is well suited for difficult surfaces and low temperatures.
- SAM-Tag® „Waste-free“** SAM-Tag „Strong“, but with a releaser liner which cannot be completely removed from the label, it can be simply folded aside to avoid any waste on the ground.
- SAM-Tag® „Economy“** Dimensions 105x148 mm. This is a standard tag without an adhesive layer.

All 3 versions are available in white and printable in 3 colours.
