

SK14SFT (For A Slate Roof)

Product Information

For a slate roof, our 356mm (14") tubular skylights use the latest technology in collecting and reflecting light. Designed to provide maximum light throughput, the Solar Flair tubular skylight is perfect for dark areas where a standard window or skylight may not be practical.

The tube reflects 95% of the available sunlight*. Our low-profile ceiling diffuser spreads the sunlight evenly through the interior space.

The Solar Lens dome collects and reflects light, providing maximum light during low light hours, e.g. during winter months, early morning, late afternoon etc.

Product weight 10.43kg.

Kit supplied with 2No. 0.6 metre (dual rotation) adjustable angle tubes.

The 356mm (14") tubular skylight spreads light evenly up to 300 square feet*.

Exclusive stepped-in edge on low-profile Solar Lens dome releases even more light into the tube.

Adjustable tubes (two per kit) make it easier to manoeuvre around obstacles.

The strong, UV-resistant acrylic dome has an excellent optical clarity and scratch resistance.

PLEASE NOTE THE TYPE OF FLASHING IS SUITABLE FOR SLATE.

* Based on full midday sun
