

Steel Access Panels, Picture Frame - PFS

Product Information

The range of non-fire rated steel access panels provides access into all types of wall and ceiling construction voids.

The panels consist of 1.0mm powder coated zintec steel with a slim profile, producing a lightweight, robust panel where access to building services is required.

The metal frame holds a flush metal door through a simple concealed hinge and is held closed with a budget catch. Secure key lockable versions are available. As standard, all doors are powder coated in white RAL 9010 with 20% gloss. Panels can be over painted on site.

Other colours are available to order. The panels are also available in Chrome (please call and quote using product code and postfi x ref C) and Stainless Steel for use in corrosive areas (quote using product code and postfi x ref SS).

For a nominal charge, the lock can be powder coated in white to match the face of the access panel. Please call to discuss.
