Yes. High-strength bonding tape is a proven alternative to screws, rivets, welds and other forms of mechanical fasteners.

Unlike screws or rivets—which join materials at a single point—high-strength bonding tape permanently adheres one substrate to another while spreading the stress load across the entire length of the joint.

Once materials are joined with 3M™ VHB™ RP tape a virtually indestructible "weld" is created.

Skyscrapers, cell phones, refrigerators ... all rely on high-strength bonding tape

to complete one or more steps in the assembly process.

Some examples include:

- Bonding lightweight skins to frames
- Bonding stiffeners to panels
- Attaching decorative materials
- Assembling electronics
- Attaching lenses
- Hanging signs and letters

Extraordinary strength, conformability, versatility and UV- and weather-resistance makes 3M™ VHB™ RP great for bonding:

- Glass
- Painted Surfaces
- Metal
- Many plastics
- Sealed wood
