

ZONITH

DRONE DETECTION

Instant, Intelligent Drone Detection

ZONITH's Drone detection solution provides early warning of incoming drones from up to 1.5 kilometers away. Guards and control rooms receive these messages instantly, before taking evasive action.

ZONITH brings Drone Detection to

- Airports
- Prisons
- Psychiatry
- Stadiums
- Maritime vessels

Warning alarms sent instantly to Security

Controllers and security guards receive drone attack warnings immediately. Logical directional information is provided, for e.g. "Drone approaching North Wing", enabling guards to make a visual identification of the drone itself. Guards can stand guard ready to apprehend the recipient of contraband being delivered, in the case of a prison, or alert air traffic control in the case of drone activity around an airport.

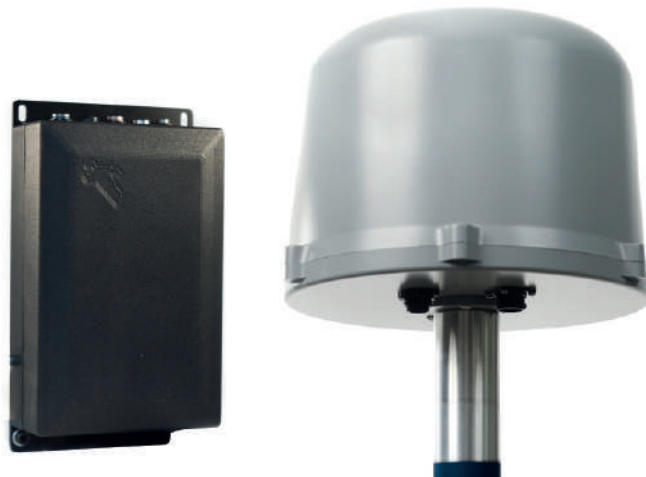

Terrorist and criminal drone attacks on humans and facilities are increasing rapidly

Prisons and psychiatric centres are at risk of drones delivering drugs, weapons, or mobile phones. Larger events, where many people are gathered, as well as embassys and places of public interest, are at risk of attacks from drones. The list of threats attributed to drone attacks is long and continues to grow ever longer, the more sophisticated drones become.

WALL AND MAST MOUNTED **WATCHMAN** AND **WOLFPACK** DETECTORS

- Wall mount detector, with 60 degree detection angle
- Dome mast detector, with 360 degree detection angle
- 1.000-1.500 meter detection range
- Easy to install, requiring simply LAN connectivity and Power over Ethernet (PoE)
- Drone database included and regularly updated

INSTANT NOTIFICATION ON MULTIPLE **DEVICES**

The drone detection solution ensures that staff on the ground are instantly notified about an attack. Subsequently, alerts are provided as to where the threat it is coming from.

- Instant alert notification in clear text
- Continous, directional information provided
- Support for Digital Radios, Smartphones and PC monitors

BODY WORN **WINGMAN** DRONE DETECTOR

Body worn wingman drone detectors enable guards on patrol or soldiers in the field to detect that a drone is in the area. Ideal for:

- VIP Protection
- UN and NGO Aid convoys
- Field personnel such as aid workers and rescue teams
- Buildings and facilities with the need for temporary protection
