

**Reduce your carbon footprint by 55% over 5 years by having a Waterlogic WL2000 compared to having a Bottled Water Cooler!**

An independent study was undertaken by the Environmental Consultancy Sustain, on the carbon footprint of a Waterlogic WL2000 compared with an average Bottled Water Cooler and demonstrates that the Waterlogic unit has a significantly smaller carbon footprint.

The study focused on the impacts of production, use and disposal of a single WL2000 and a BWC (bottled water cooler) equivalent over a lifespan of five years. This included all aspects from composition of material, manufacturing process, delivery of machine and energy used during use.

Carbon footprint for the WL2000 and the Bottled Water Cooler is based on the life cycle phases and a water consumption of 72 litres per month.

The more water you consume the lower your carbon footprint will be if you have a Waterlogic Watercooler over a BWC\*.
