

Odour control solutions from PHS Washrooms

Biozone resolves permanent odour problems using a unique combination of sterilising techniques, killing germs and viruses to 99.999%

Biozone - a lasting solution for permanent odour problems

Biozone from PHS Washrooms will resolve permanent odour problems and kills germs both in the air and on surfaces.

It kills bacteria and viruses to 99.999%, including Flu viruses, E.coli, Salmonella, Streptococcus and Hepatitis A.

Highly effective in a wide variety of applications including washrooms, doctors' waiting rooms, nursing homes and food preparation areas. Biozone works using a combination of five sterilising techniques:

- 1 Ozone** obliterates bacteria, viruses and fungi, and removes odour from the air
- 2 Photoplasma**, a type of energised oxygen, eliminates the reproductive capability and reduces the number of micro-organisms which disinfects the air
- 3 Negative ions** decrease the total concentration of harmful chemicals in the air
- 4 Deep UV light** sterilises micro-organisms that pass through the unit
- 5 Photo Catalytic Oxidation** process destroys volatile organic compounds, such as methane, on surface materials

**For more information on Biozone call 029 2080 9090
or fax 029 2090 9091 quoting ref S1312**
