

ALUEXCEL EDGE OPTION - Macadam to Wet-pour

Aluminium Flexible Edge

For those requiring the ultimate edge restraint for hard landscape surfaces, whether it be macadam, wetpour, resin bonded stone, block, bricks or paving slabs...*Aluexcel* is one solution.

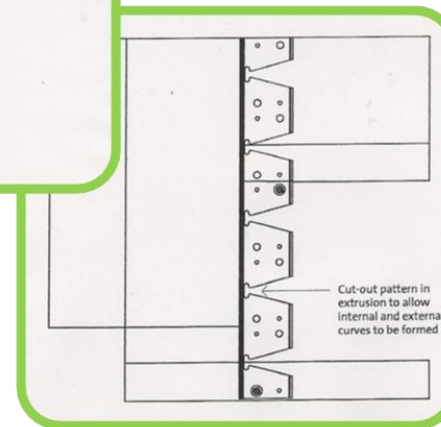

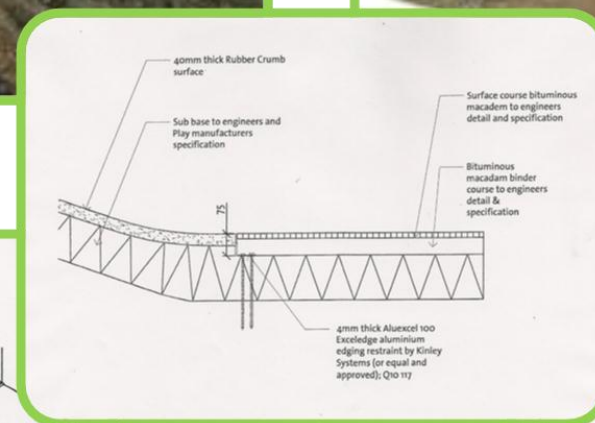

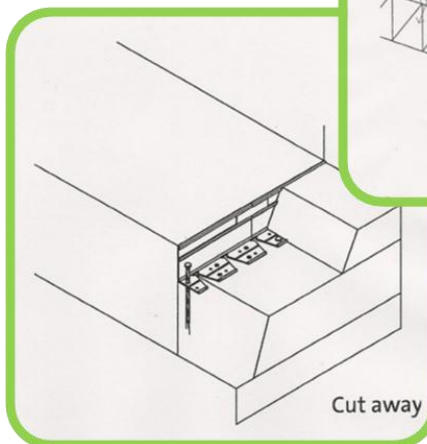

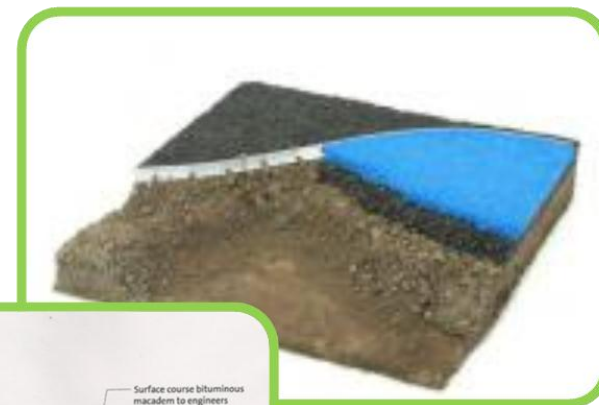

Made in the UK from 6005A grade recycled aluminium, it is strong, flexible, smart and discreet. Ideal for a surface edge finish which needs a full thickness of material without roughness, cracking and spilling over into adjoining areas.

Available is a range of different height finishes to suit most applications. Edge preparation is normally completed during the groundwork phase.

The adjoining photos show a typical Macadam to [Wet-pour](#) interface. Aluexcel is one option which gives excellent results, both visually and cost wise.

Use with:

- Asphalt
- Wetpour rubber & other [safety surfacing](#)
- Resin Bound Stone

Water House, 35 Water Lane, Wilmslow, Cheshire, SK9 5AR
