

Ball Stop Netting

Ball stop netting is installed behind rugby posts and football goal ends to help prevent the ball stay within the perimeter of the playing fields.

Standard size for a ball stop fence is either 6m high or 8m high dependent on surroundings and level of sport being played. The width of the ball stop nets are anything from 10m - 40m.

Freestanding ball stop fencing is available allowing the sports fence to be mobile and eliminates installation costs.

There is many variations on the [ball stop fencing](#) with top rails available, weldmesh, chainlink infill but all is dependent on budget and also dependent on sports being played because as you can imagine the fencing for golf driving range is going to have to be a lot more robust and durable to stop the balls as applications like football, rugby, basketball and netball.
